Effective Water Storage Program:

Working with IRWD and Rosedale in the development of this innovative and cost-effective water storage program is exciting and one of DWRD's highest priorities. This project will provide new opportunities for regional water management, as well as expanding the Kern County water agency's ability to meet future water demands.

The proposed project will provide new opportunities for regional water management, as well as expanding the Kern County water agency's ability to meet future water demands.

This project is designed to improve the operation of the State Water Project and provide additional groundwater recharge and later use in water shortage years.

For groundwater storage and later use in water shortage years.
