

CALIFORNIA DEPARTMENT OF WATER RESOURCES

# MSS Data Assimilation: an Introduction

December 12, 2023

# Meeting Logistics: In-Person

- Restrooms—Down the hallway. No access code needed.
- Emergency Exit—Down the same stairwell you came up.
- To also join Teams Meeting
  - Click meeting link to join

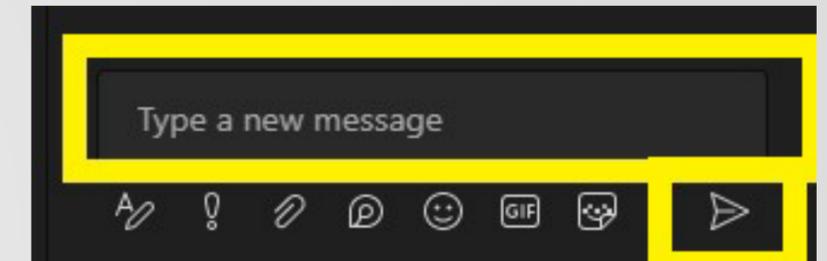

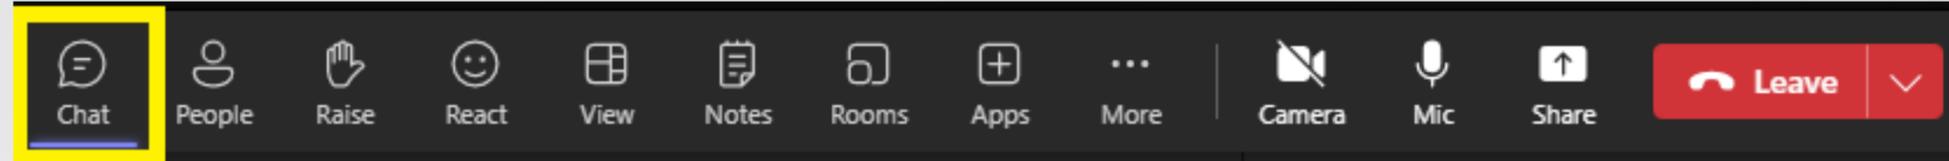

# Virtual Logistics

If you have a question or comment:

- Type it in the **Chat** box:

1<sup>st</sup>, click "Chat" in the upper right of your screen

2<sup>nd</sup> type in the chat box that opens on the right & hit "Send"

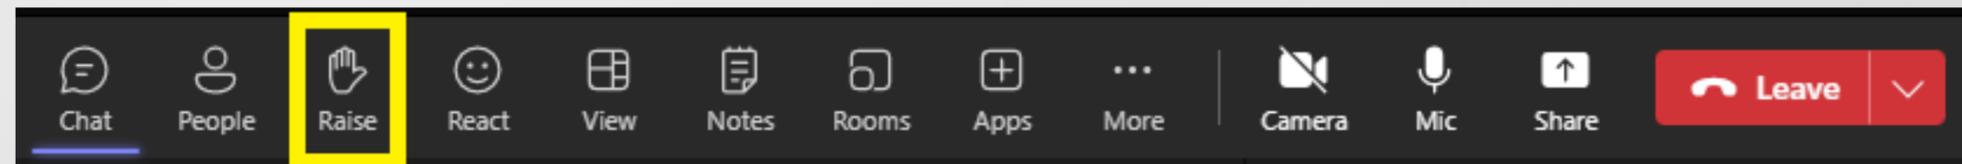

- OR, 'Raise your hand' to speak. Commenters will be called on in the order in which they 'raise their hands'

- When called on to speak:

1. Unmute

2. State your name and affiliation, then your question/comment

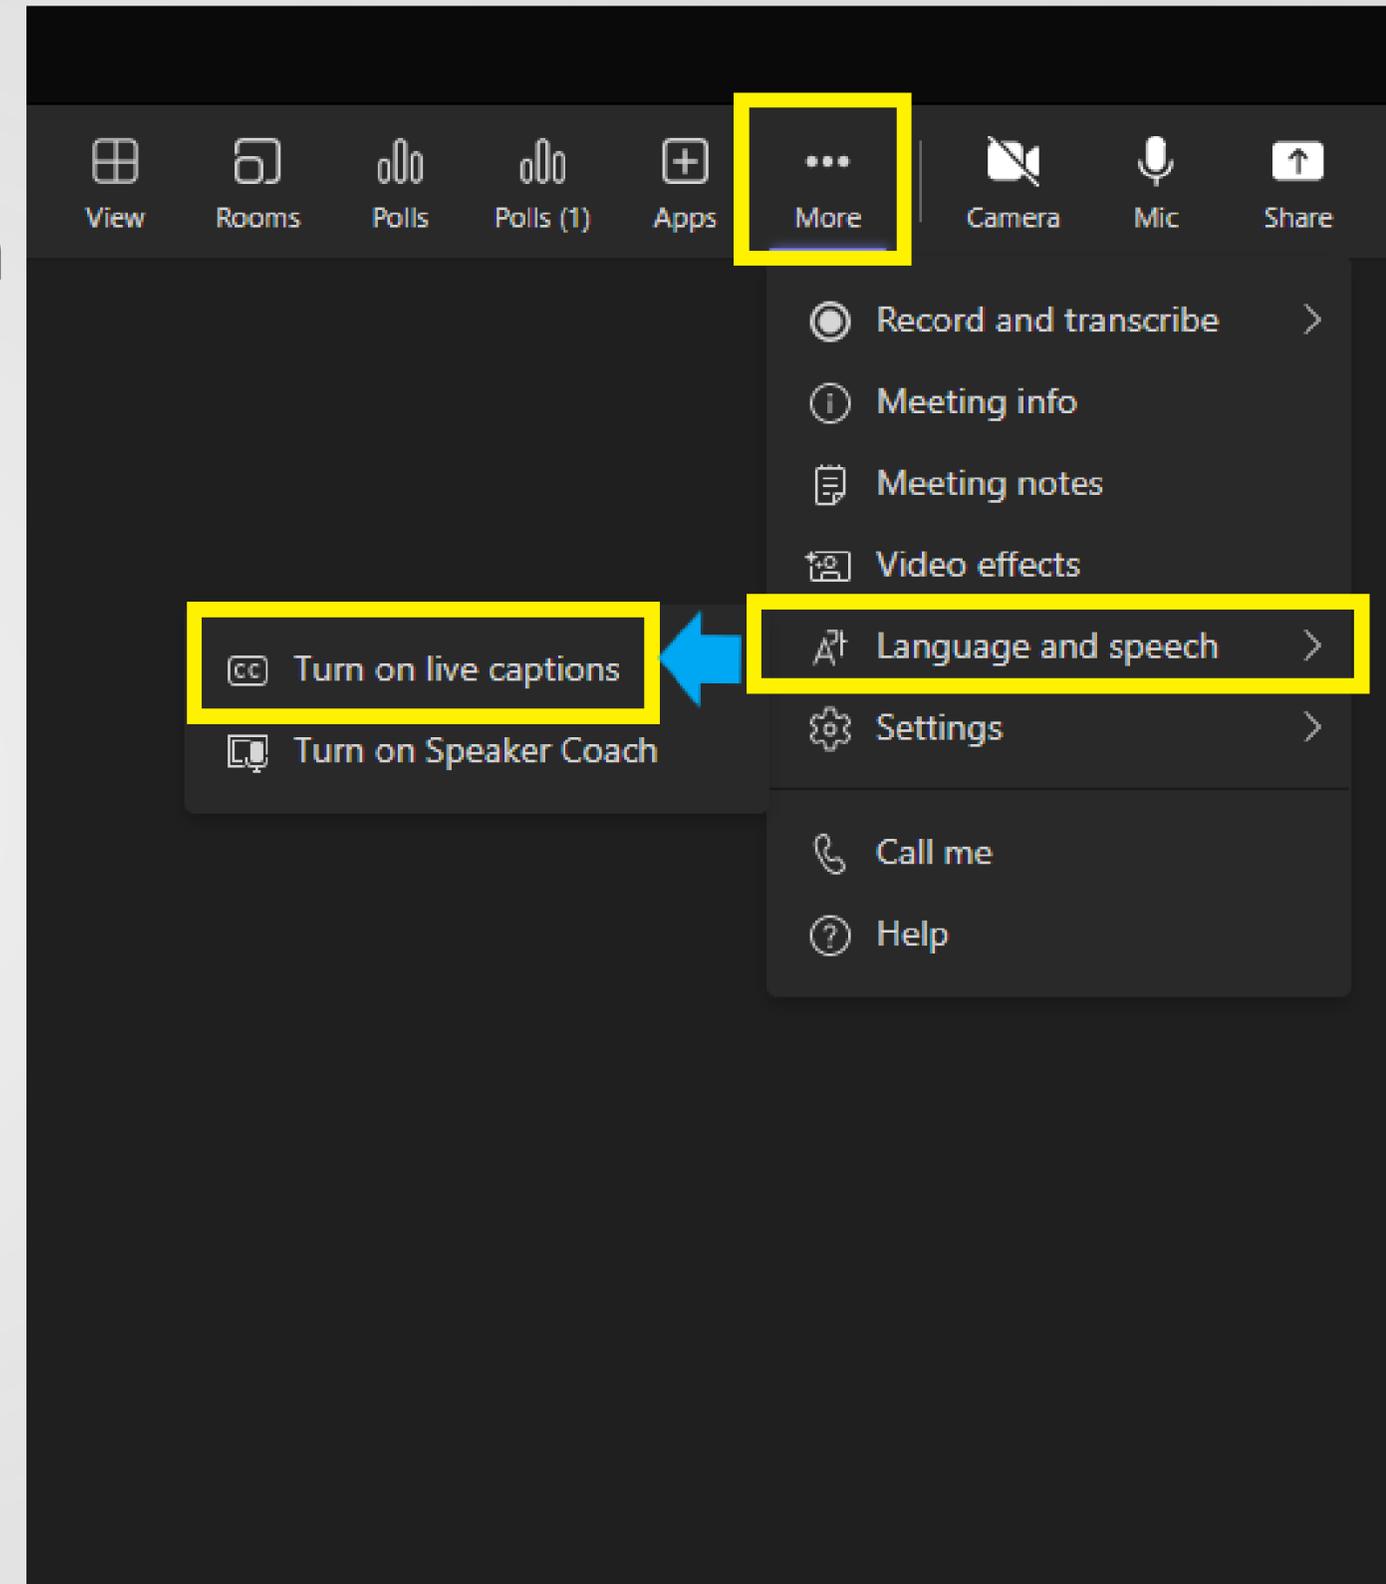

# Virtual - Accessibility

This meeting is being transcribed in real time with closed captions

To turn on closed captioning:

- Click on “More”
- Then click on “Turn on live captions”

# Agenda

Start time	Agenda Item
9:30 am	Welcome (5 minutes)
9:35 am	Logistics & Agenda (5 minutes)
9:40 am	Data Assimilation and Data Integration Workshop (90 min)
11:10 am	Discussion and Q&A (15 min)
11:25 am	Closing & next steps (5 minutes)

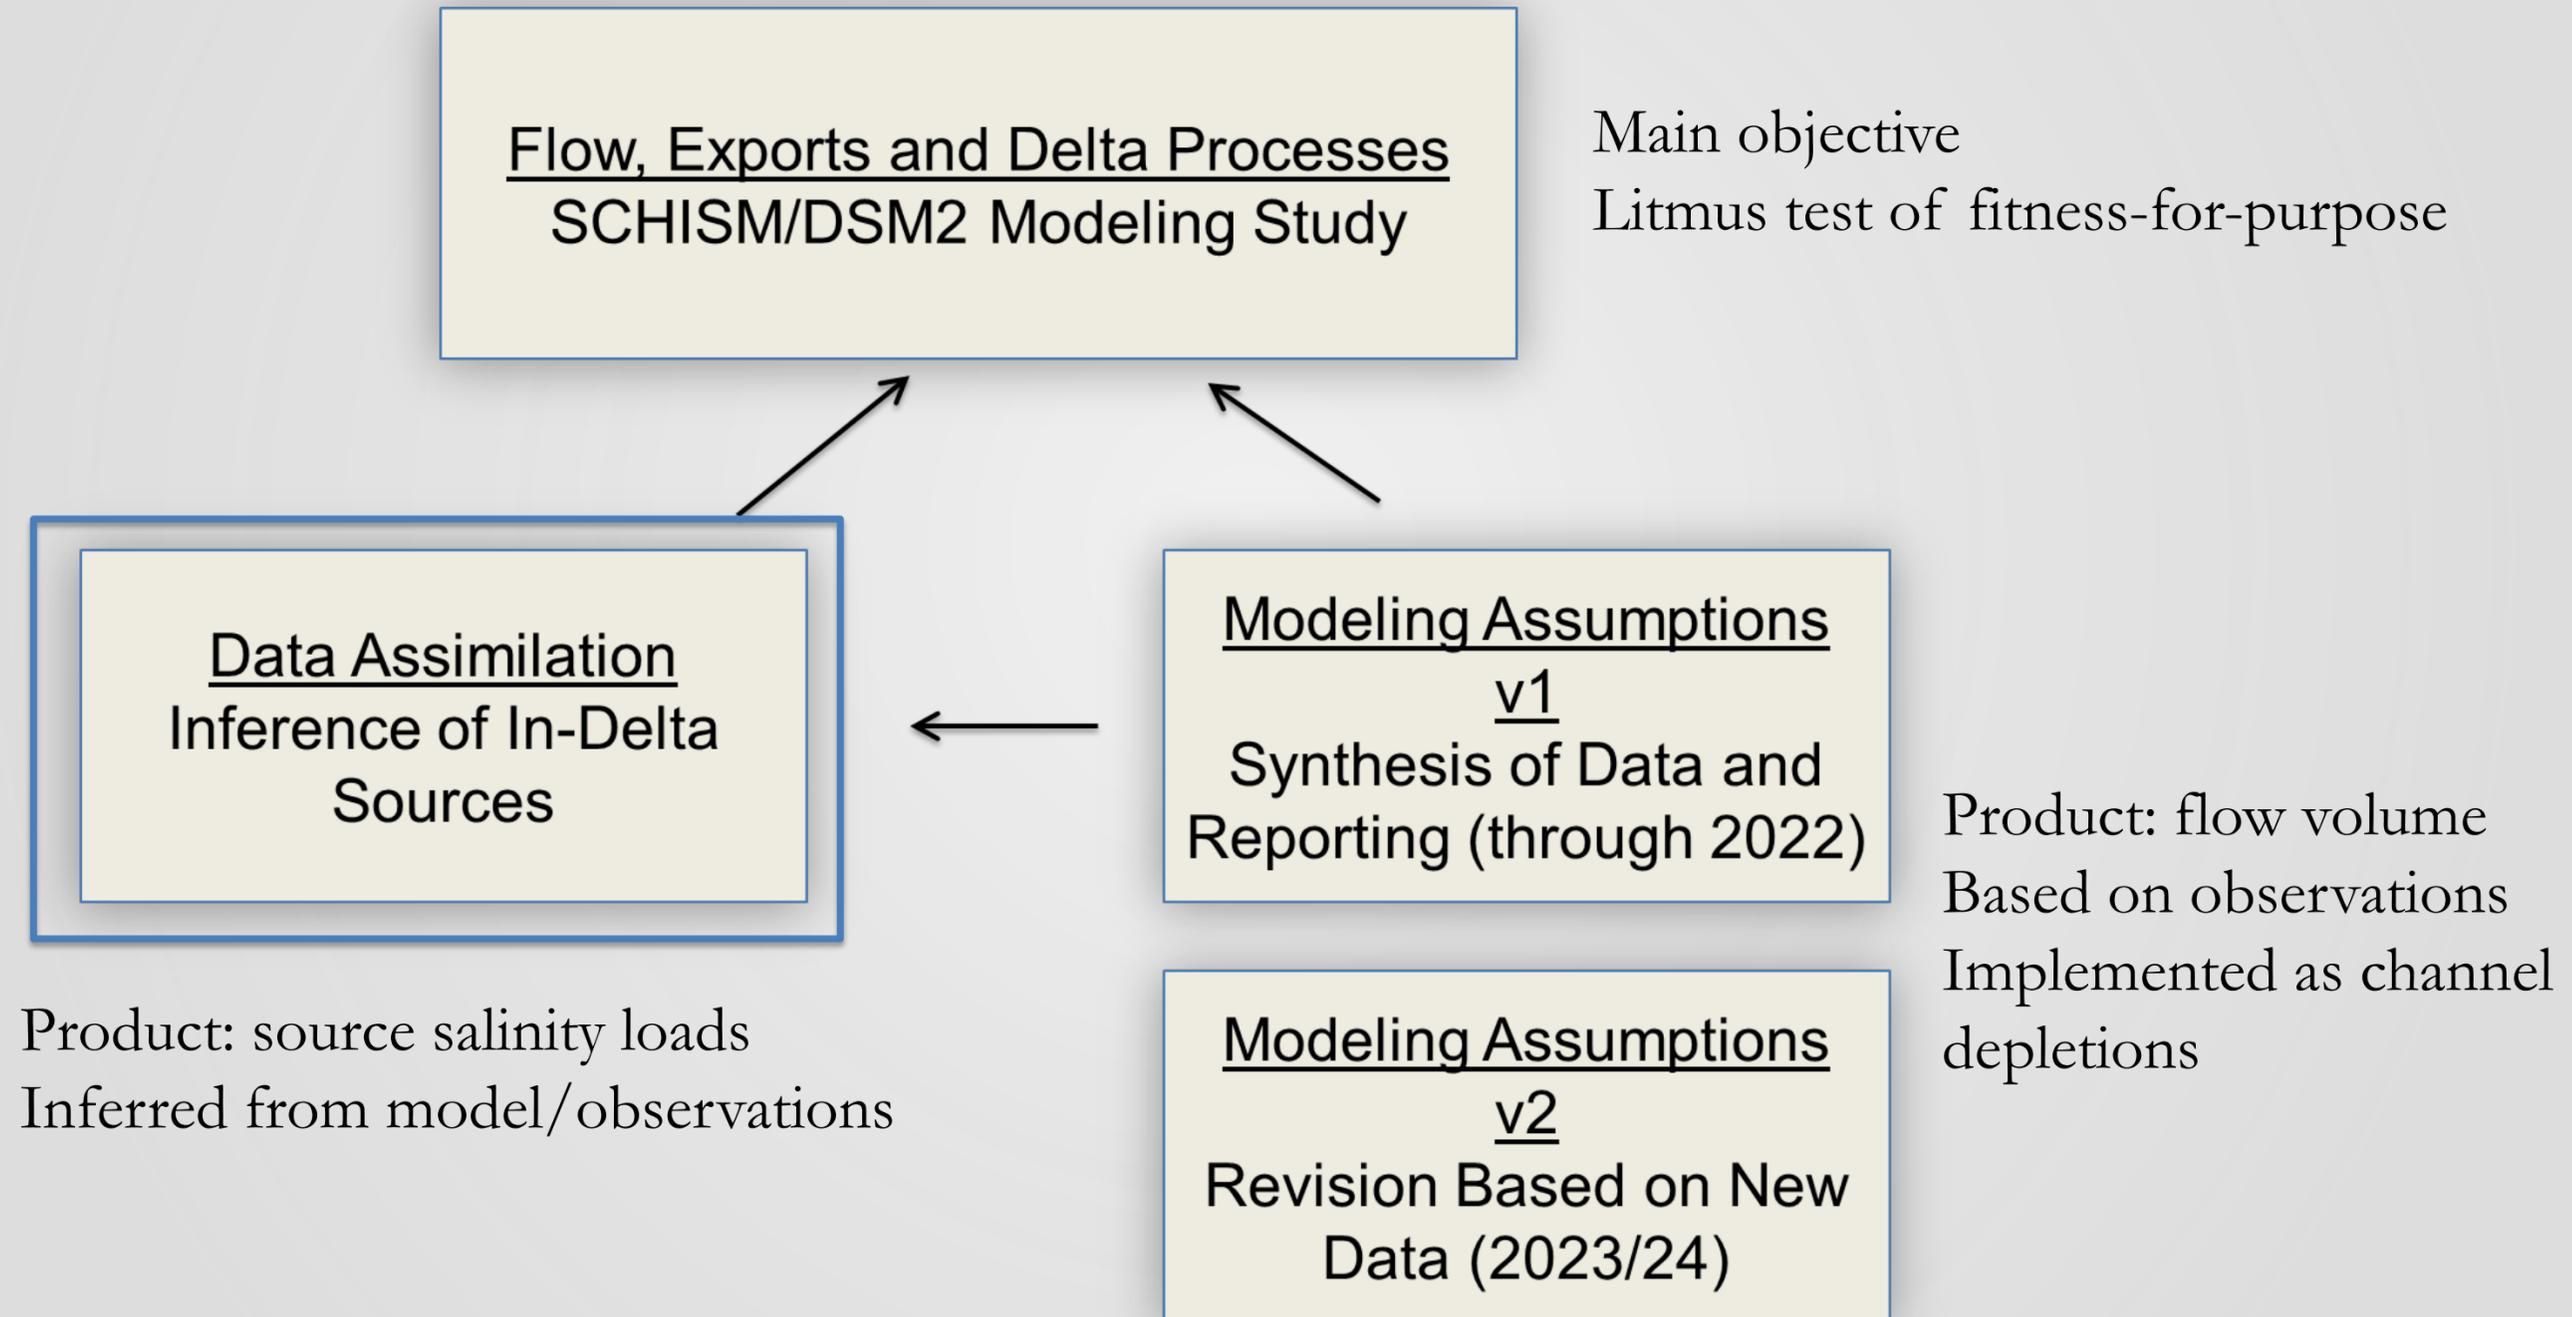

# Ground Rules

- Everyone is encouraged to participate and with comments or questions
- This session is intended to be interactive
  - Raise your hand to speak (in-person or virtually)
  - When called to speak: 1. State your name and affiliation, 2. Your question/comment
- Facilitator will:
  - Manage meeting agenda and time clock
  - Track order of raised hands (in person and virtual)
  - Intervene when discussions become overly detailed, off topic, or repetitive

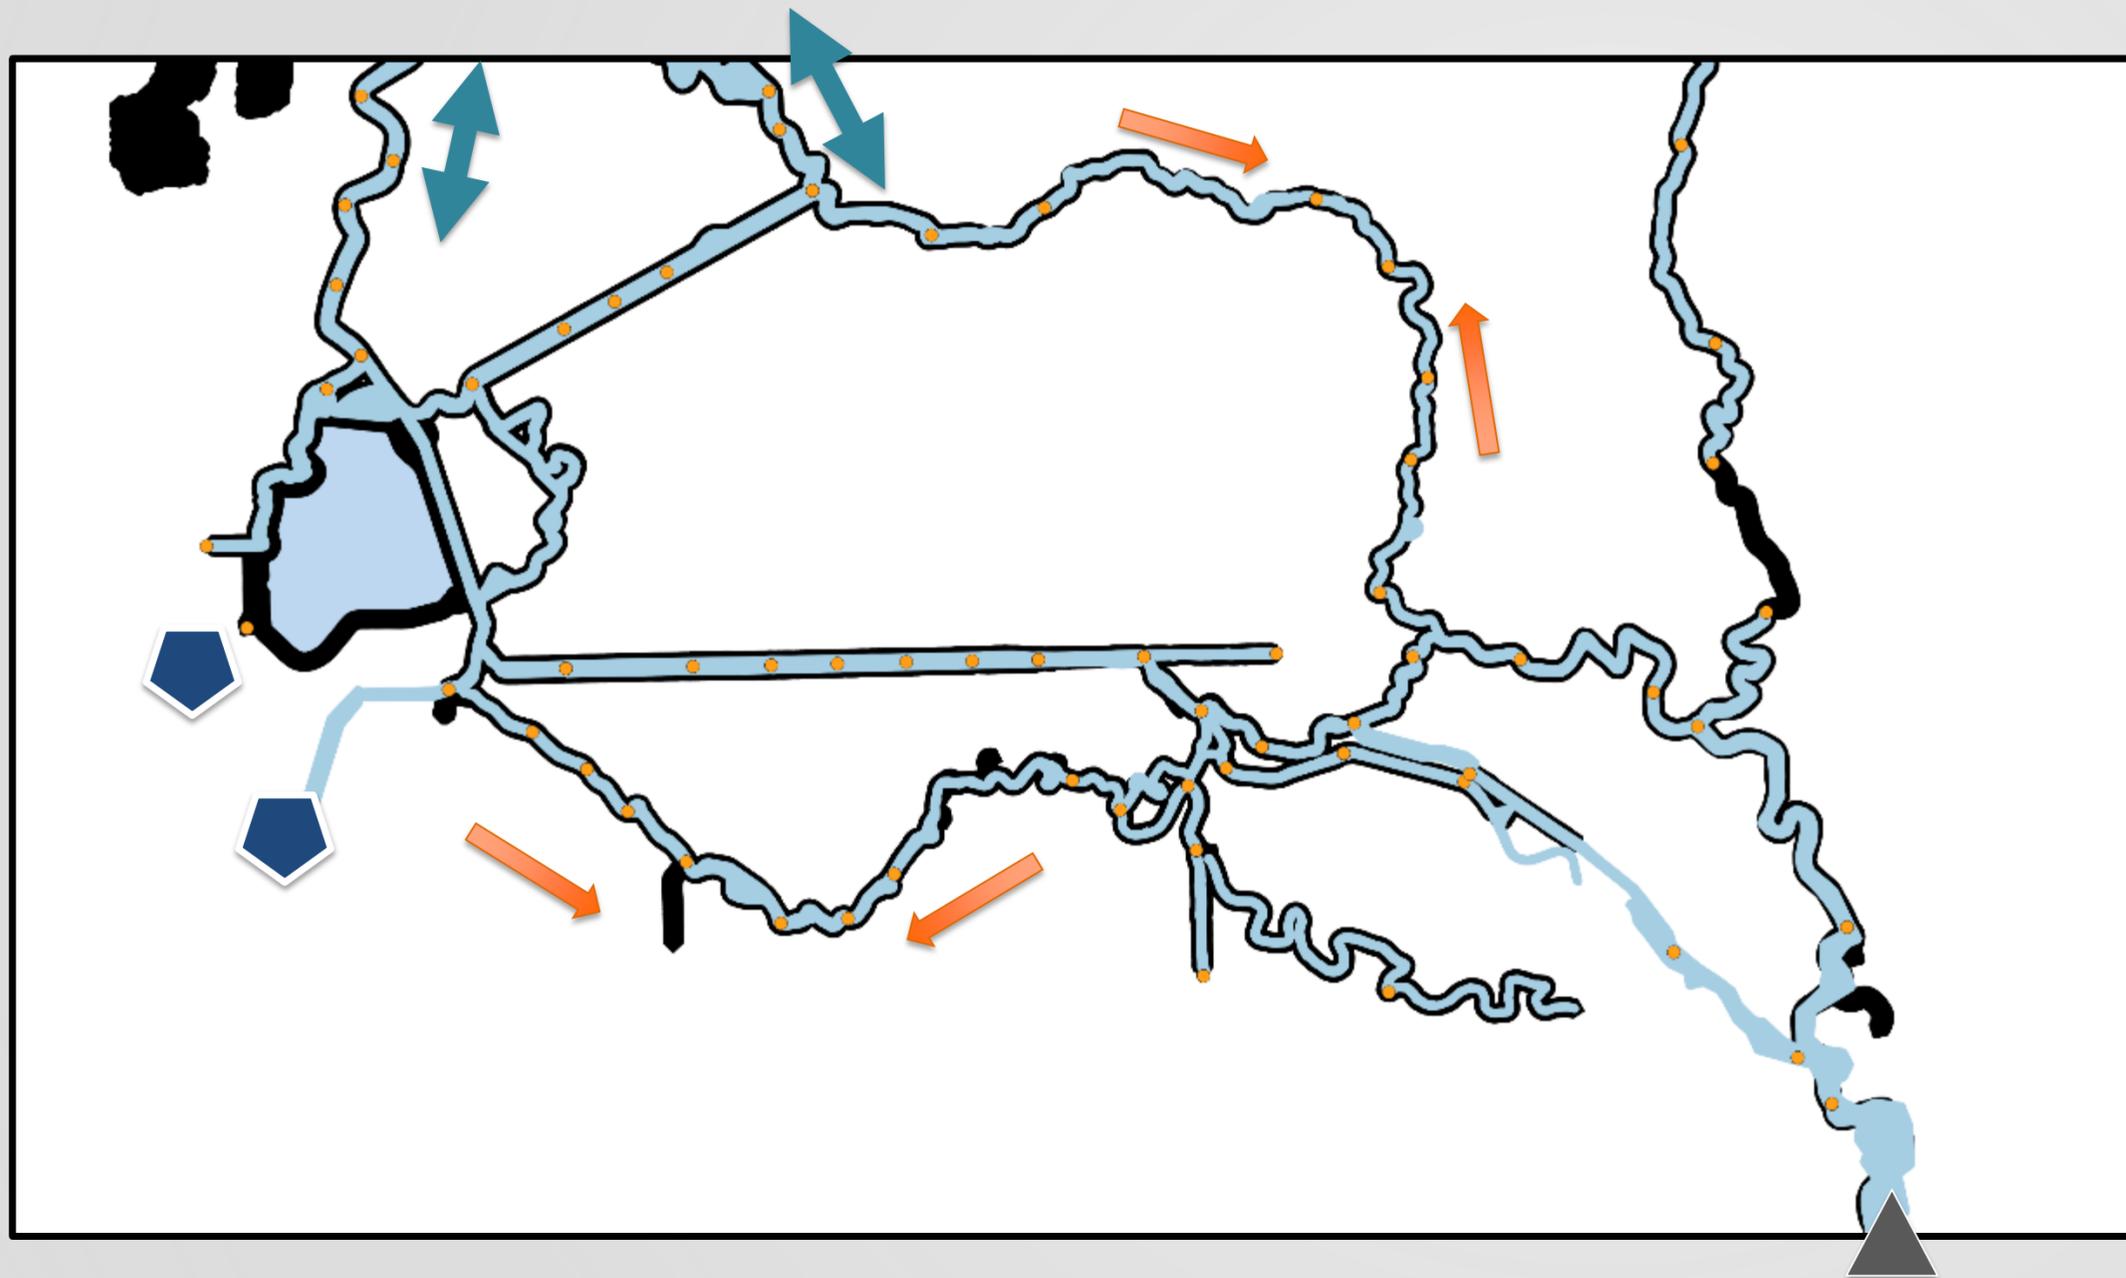

# MSS Modeling Components

# South Delta and Source Inference

Known/understood

Freshwater input

Exports

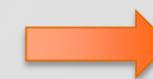

Tidal flow

Uncertain driver

In-Delta source/sink

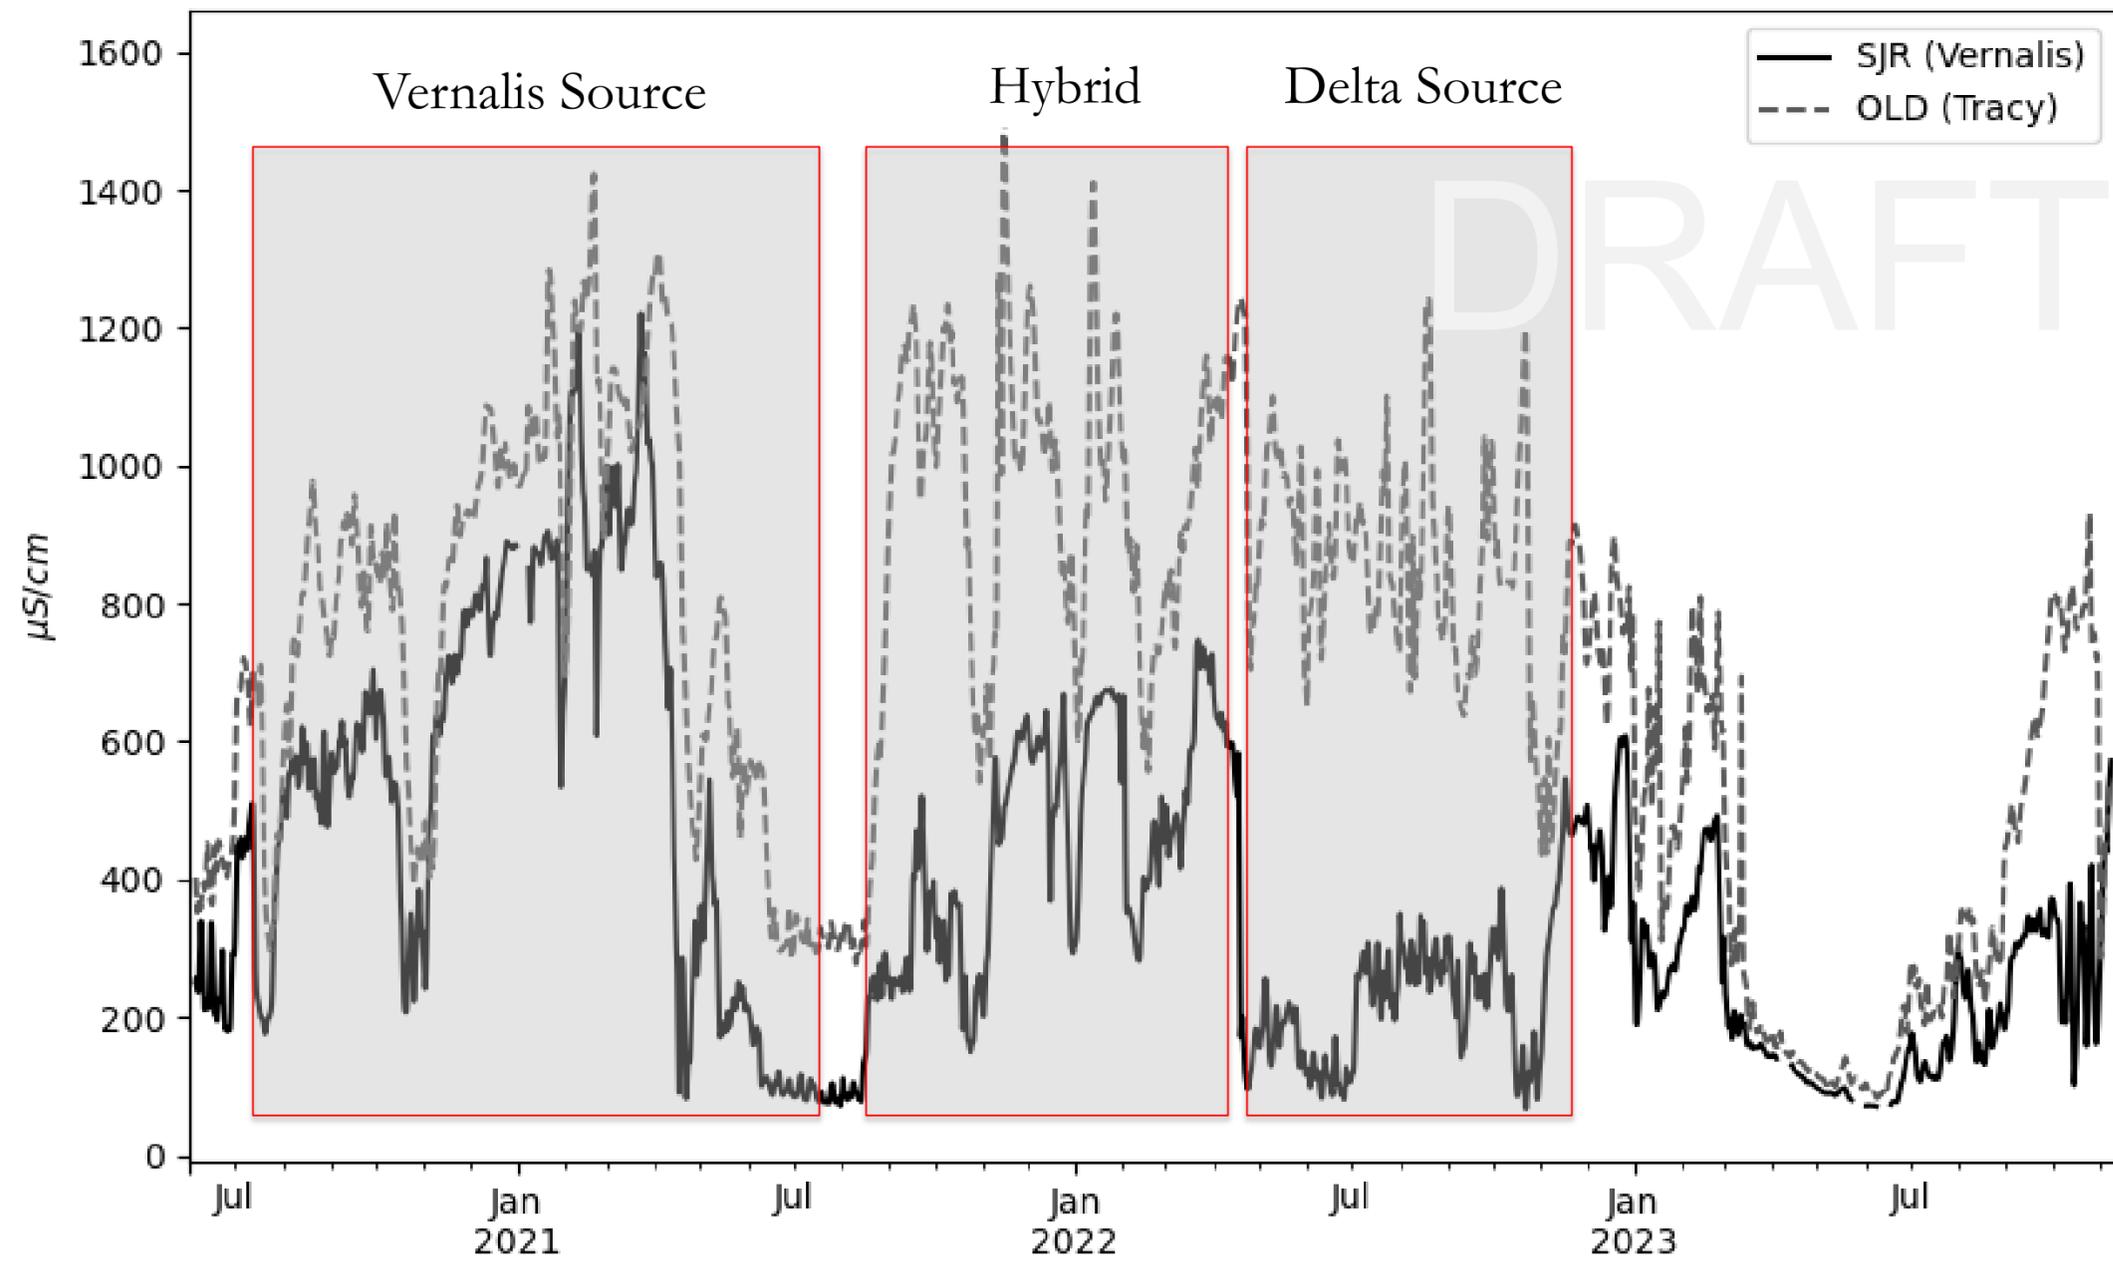

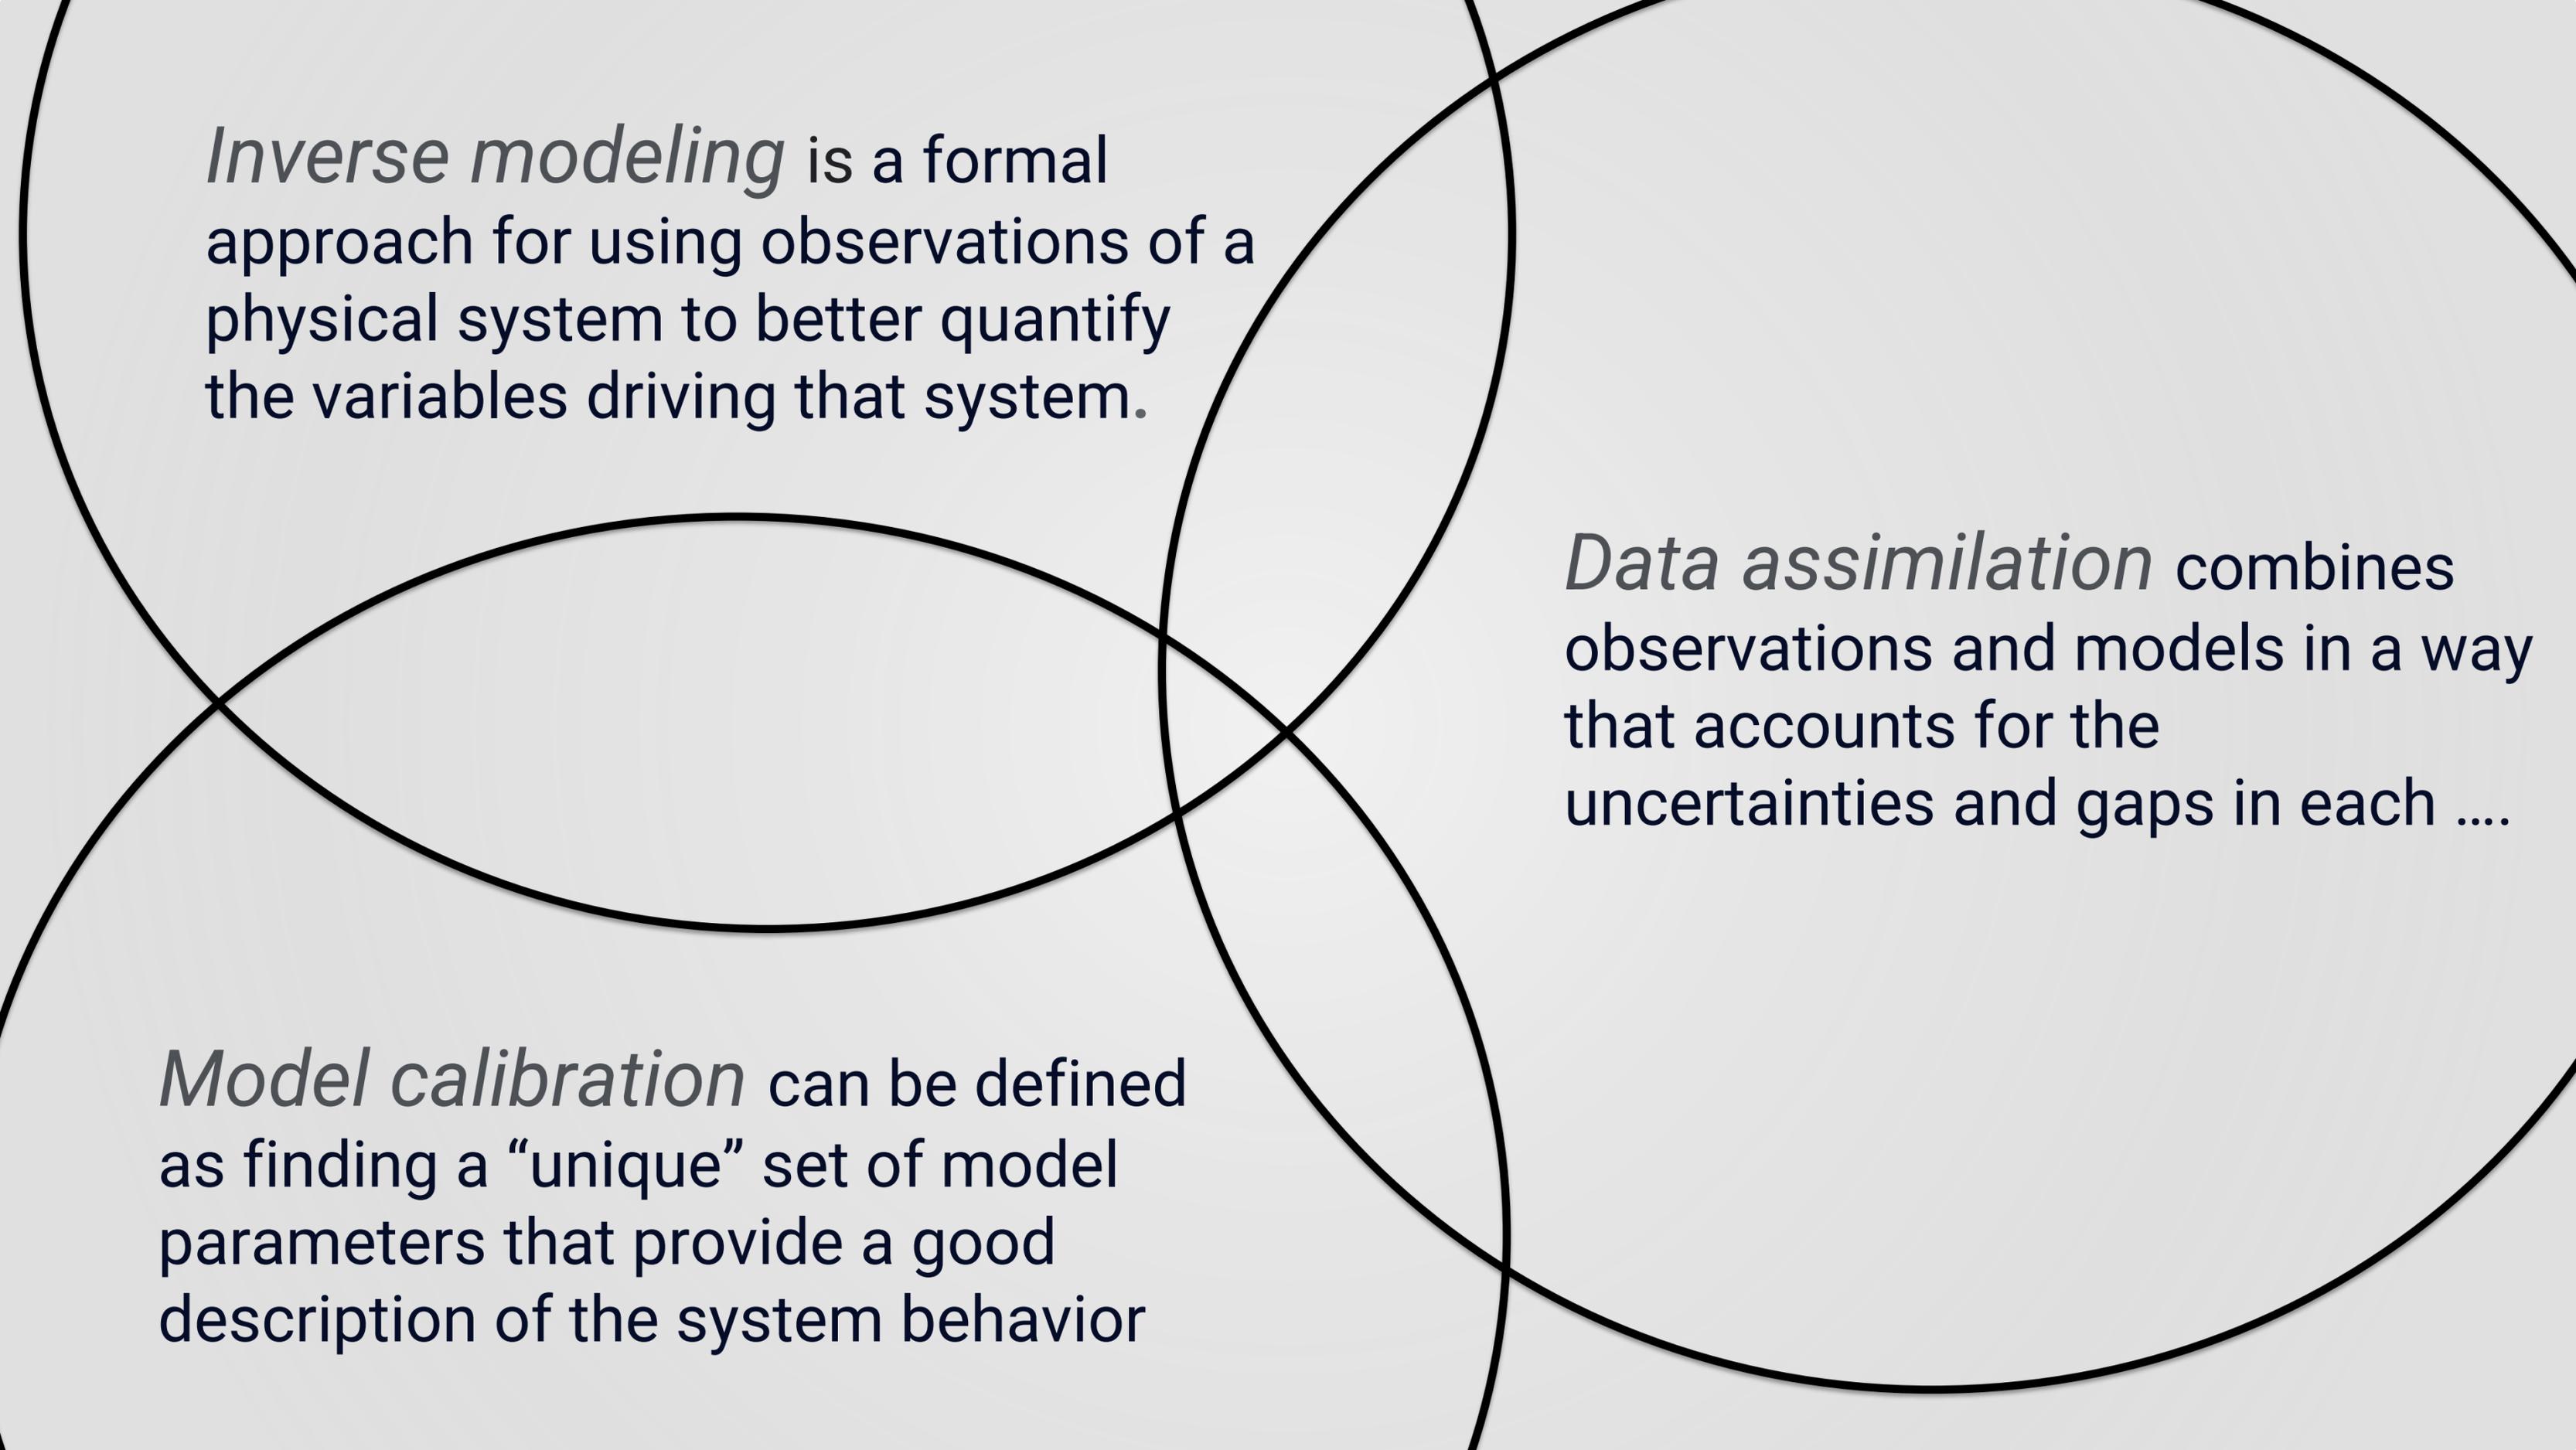

Source-driven  
circulation (null zones)

San Joaquin inflow

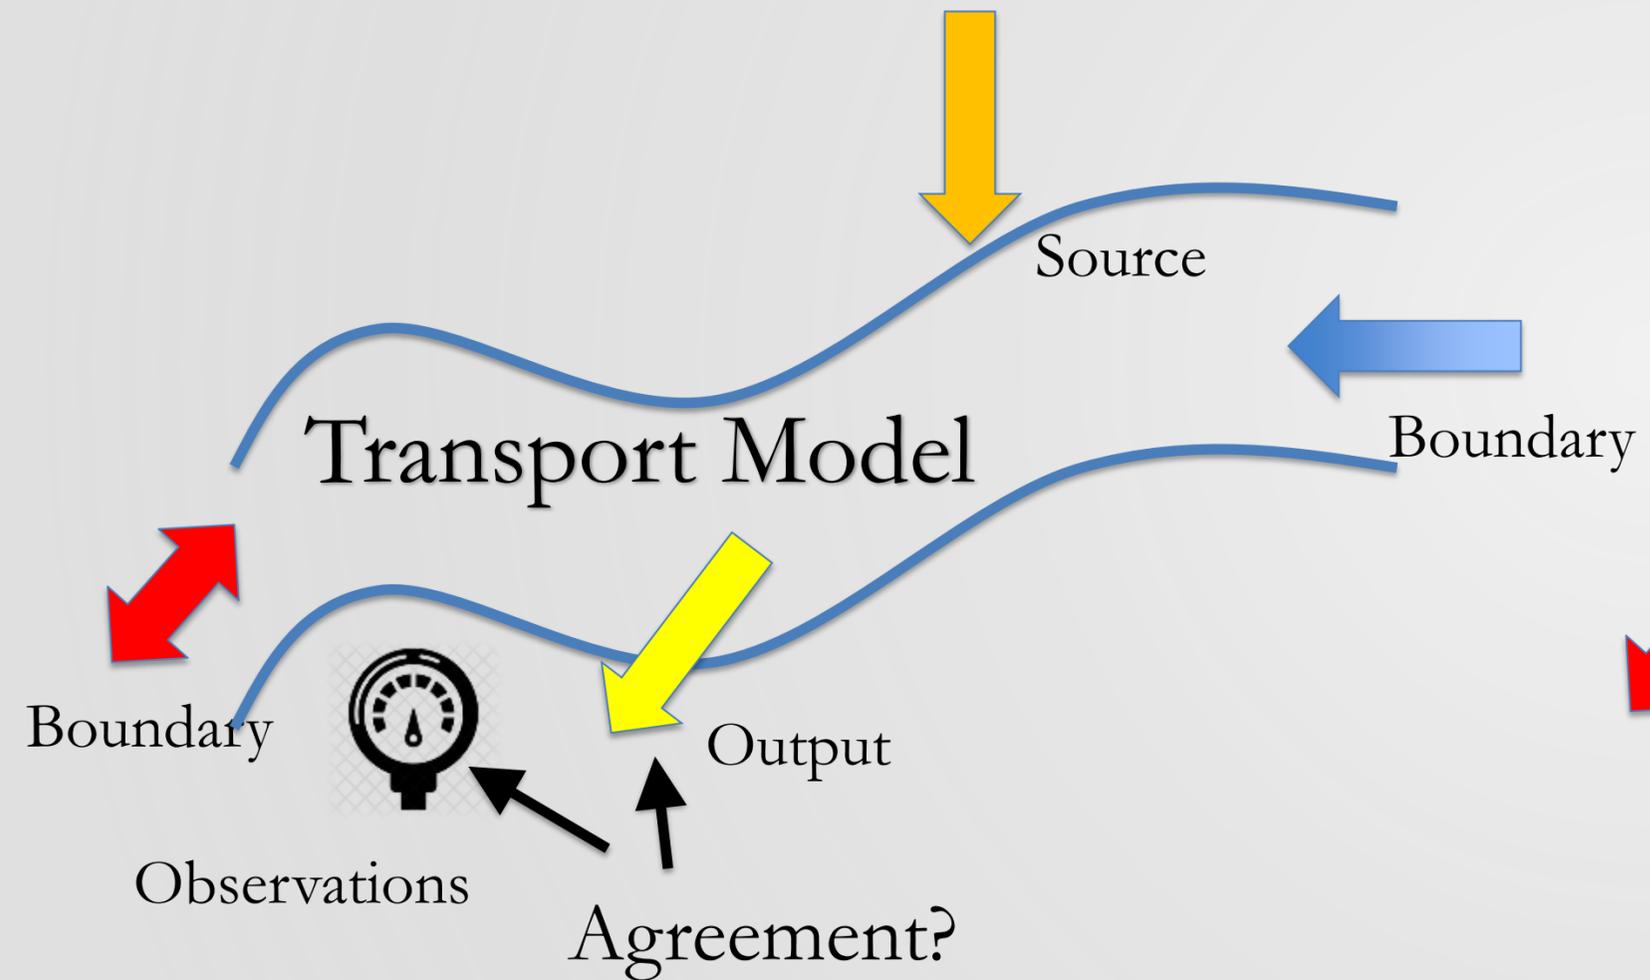

*Inverse modeling* is a formal approach for using observations of a physical system to better quantify the variables driving that system.

*Data assimilation* combines observations and models in a way that accounts for the uncertainties and gaps in each ...

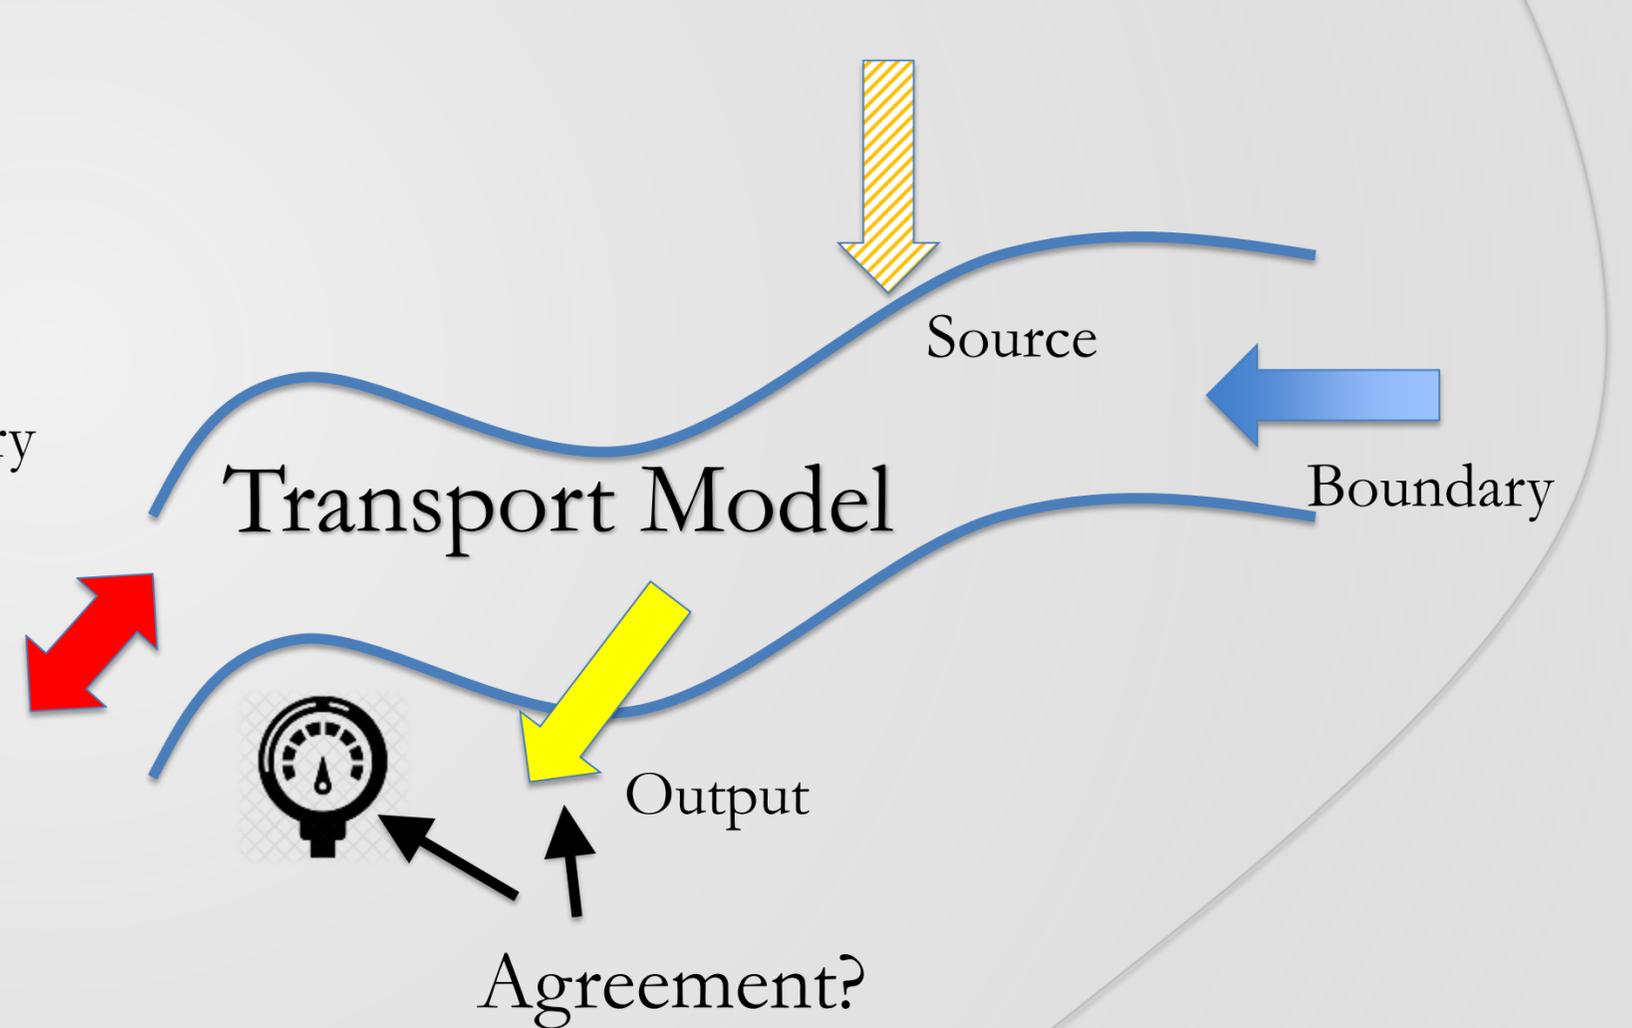

*Model calibration* can be defined as finding a “unique” set of model parameters that provide a good description of the system behavior

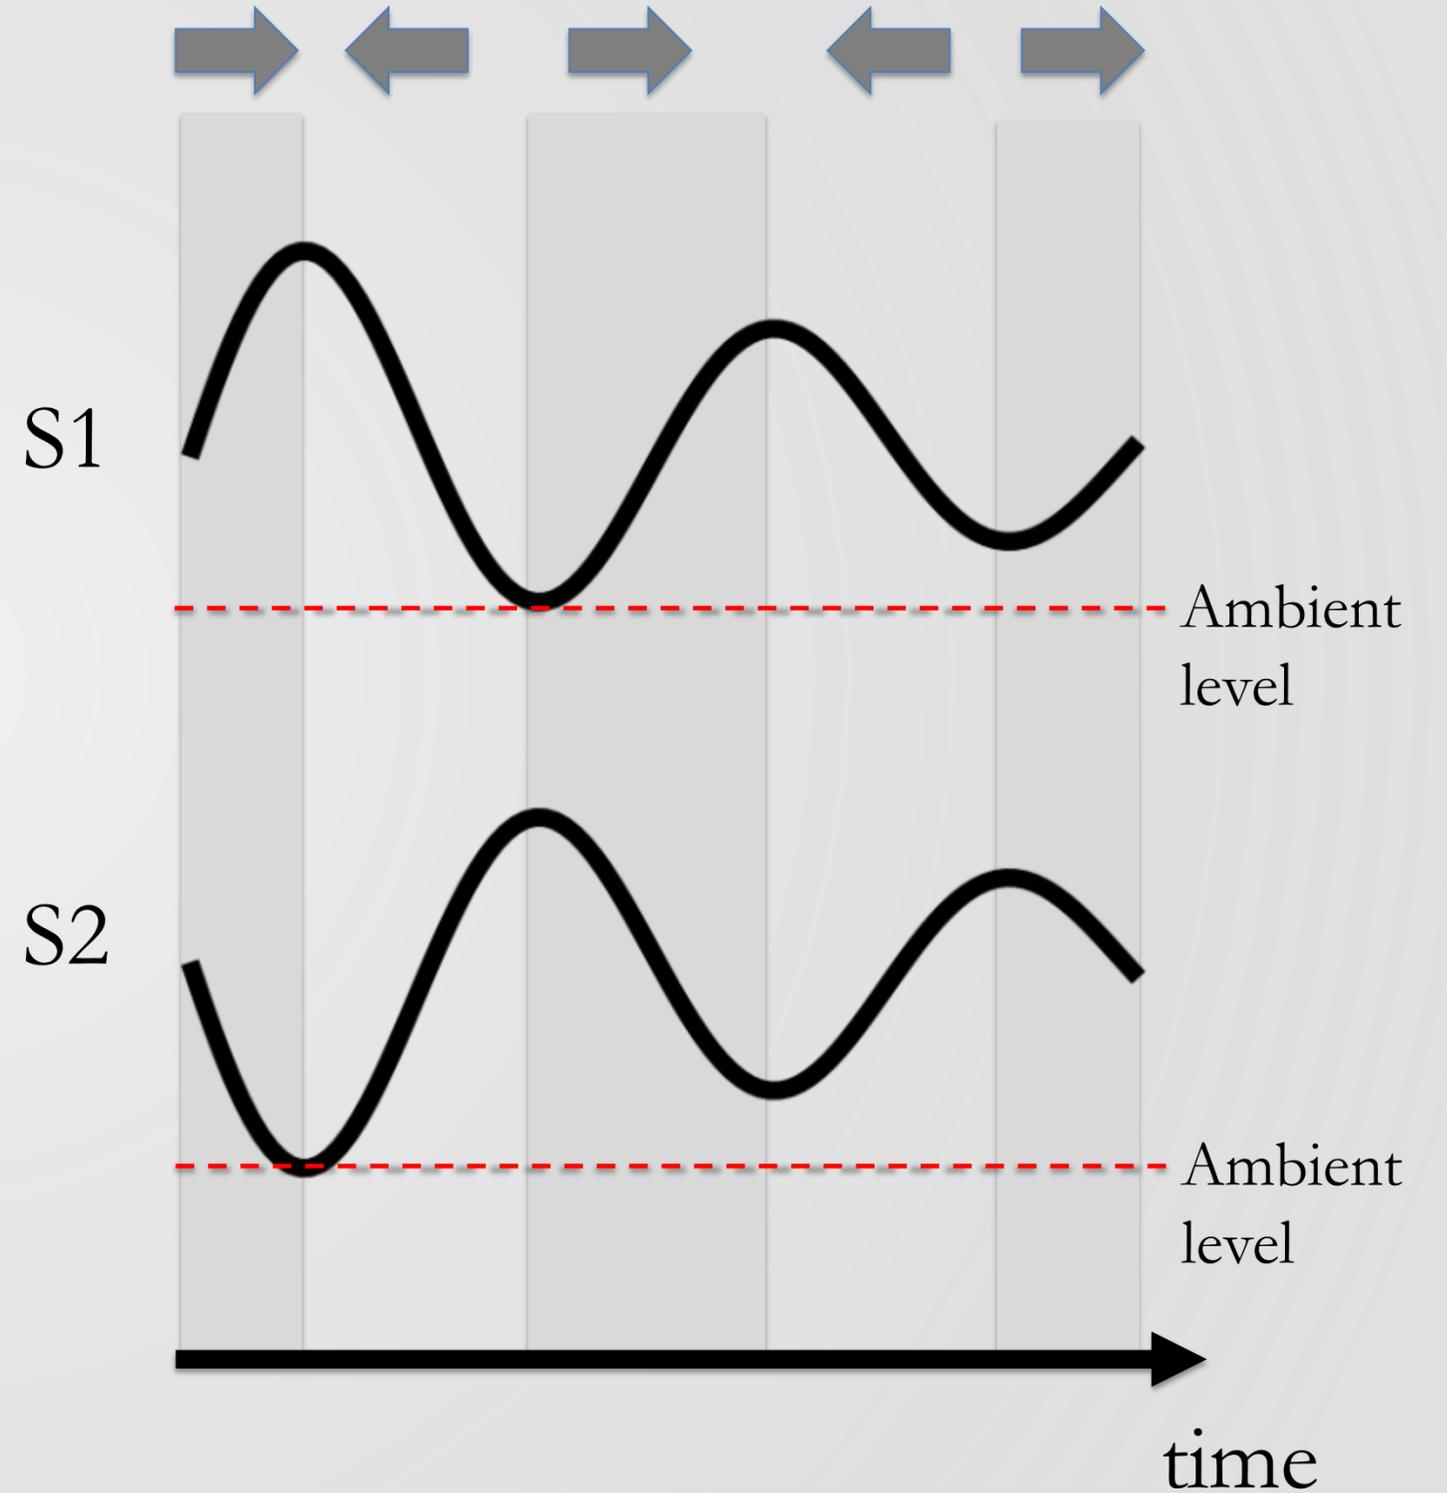

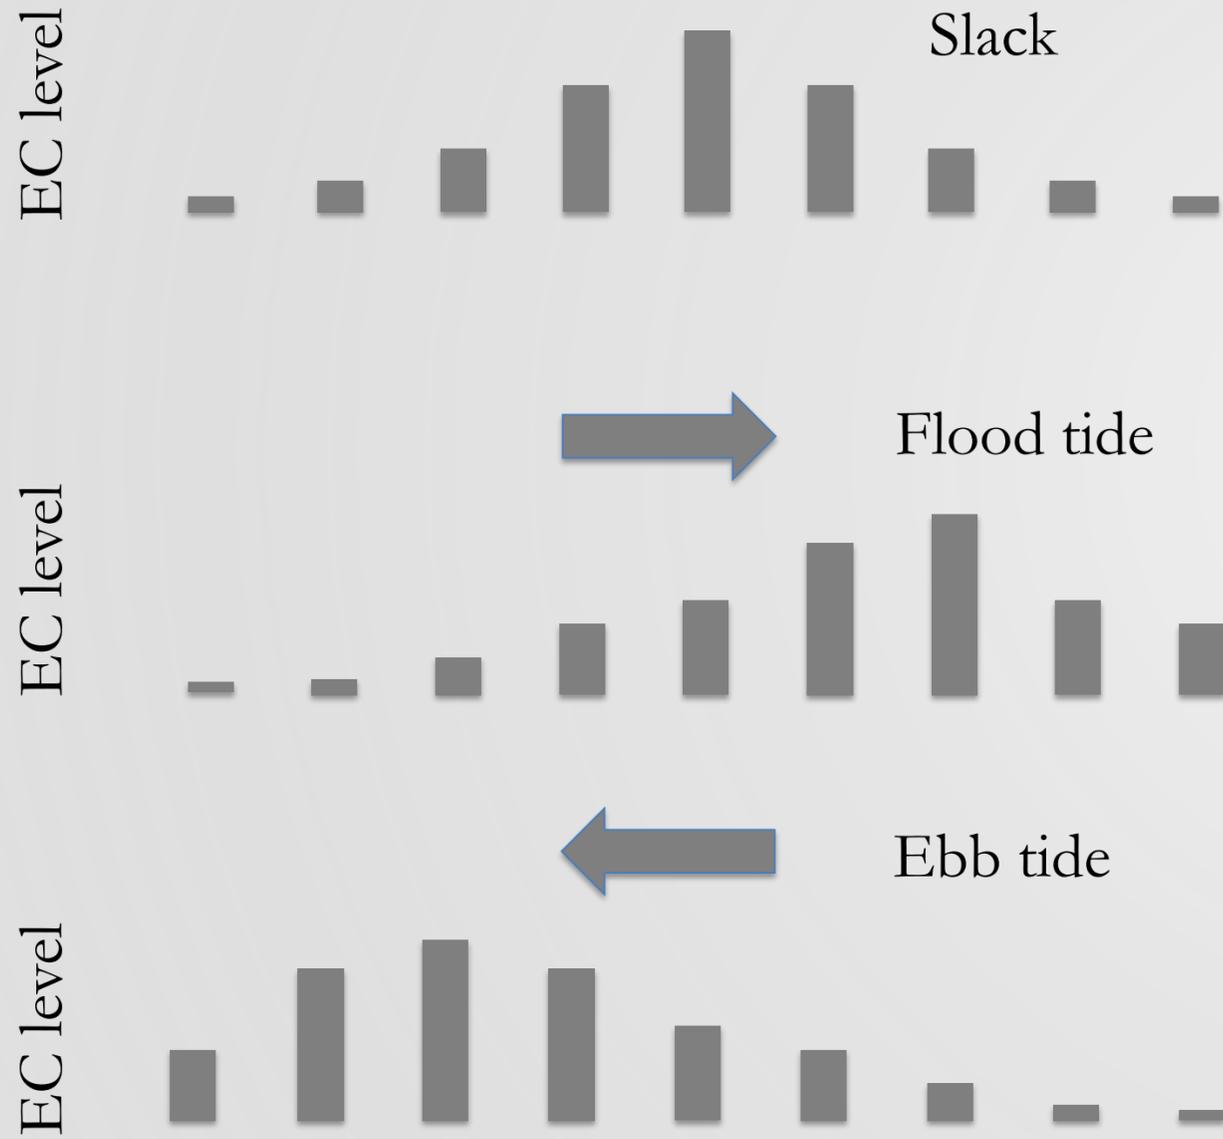

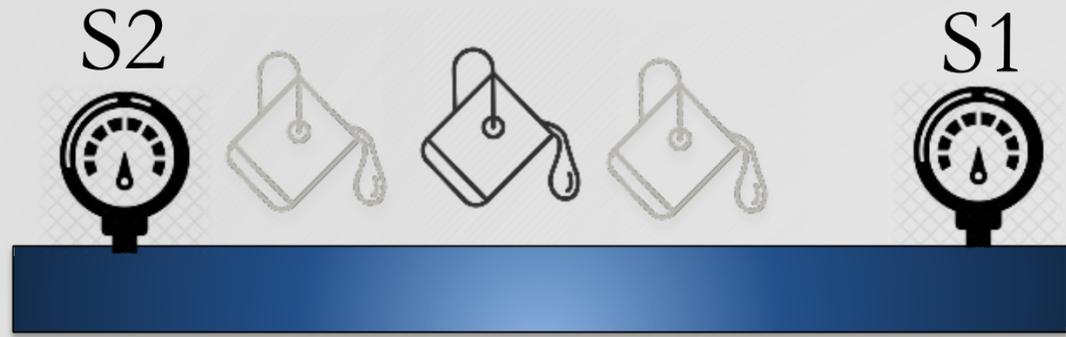

# Forward Modeling vs Inverse Modeling

- Forward

- Inverse

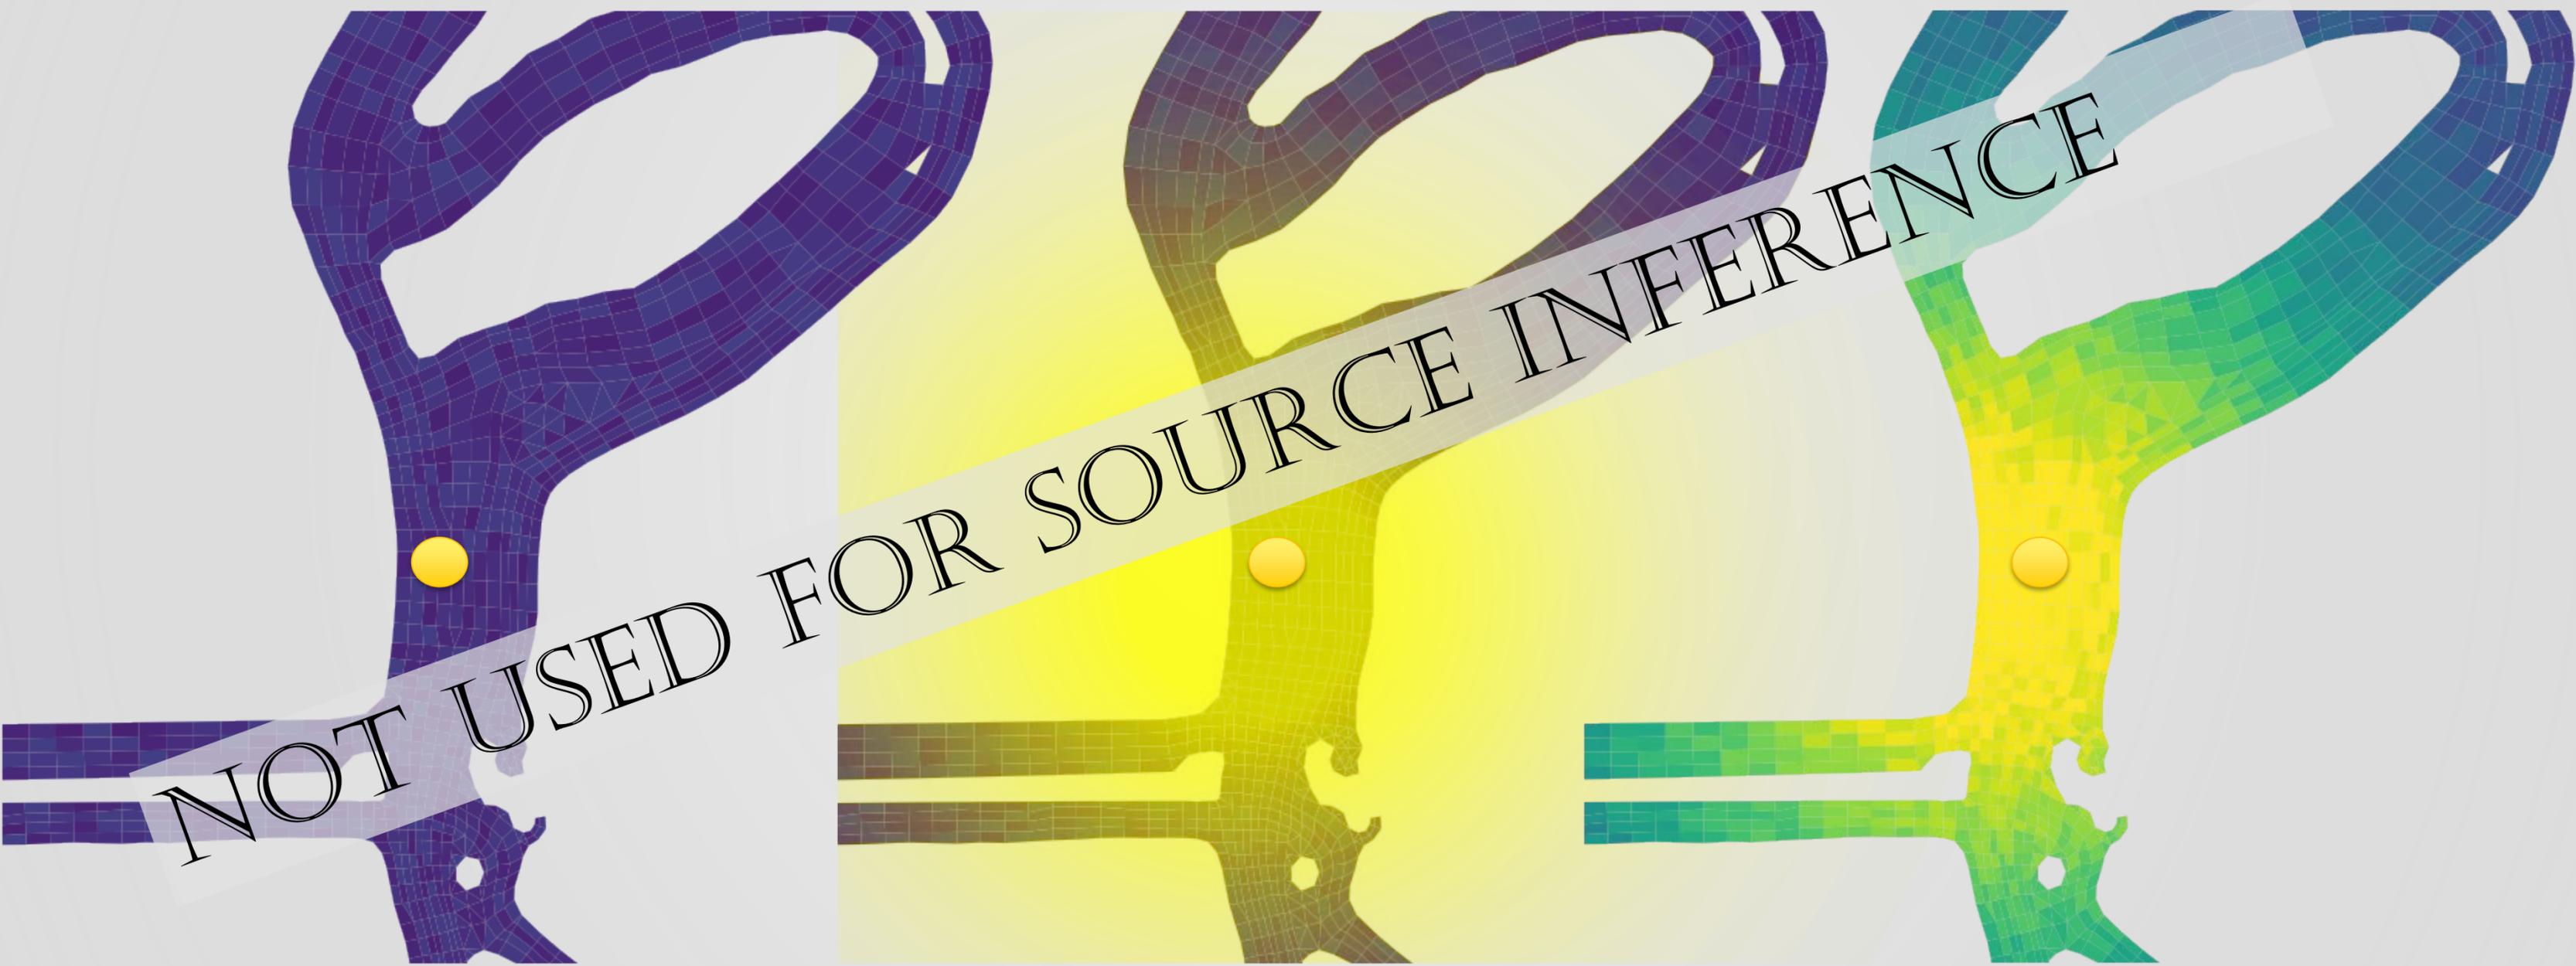

# Flavors of Data Assimilation/Inverse

- Nudging
- Response/fingerprint based inverse modeling
- Kalman filters

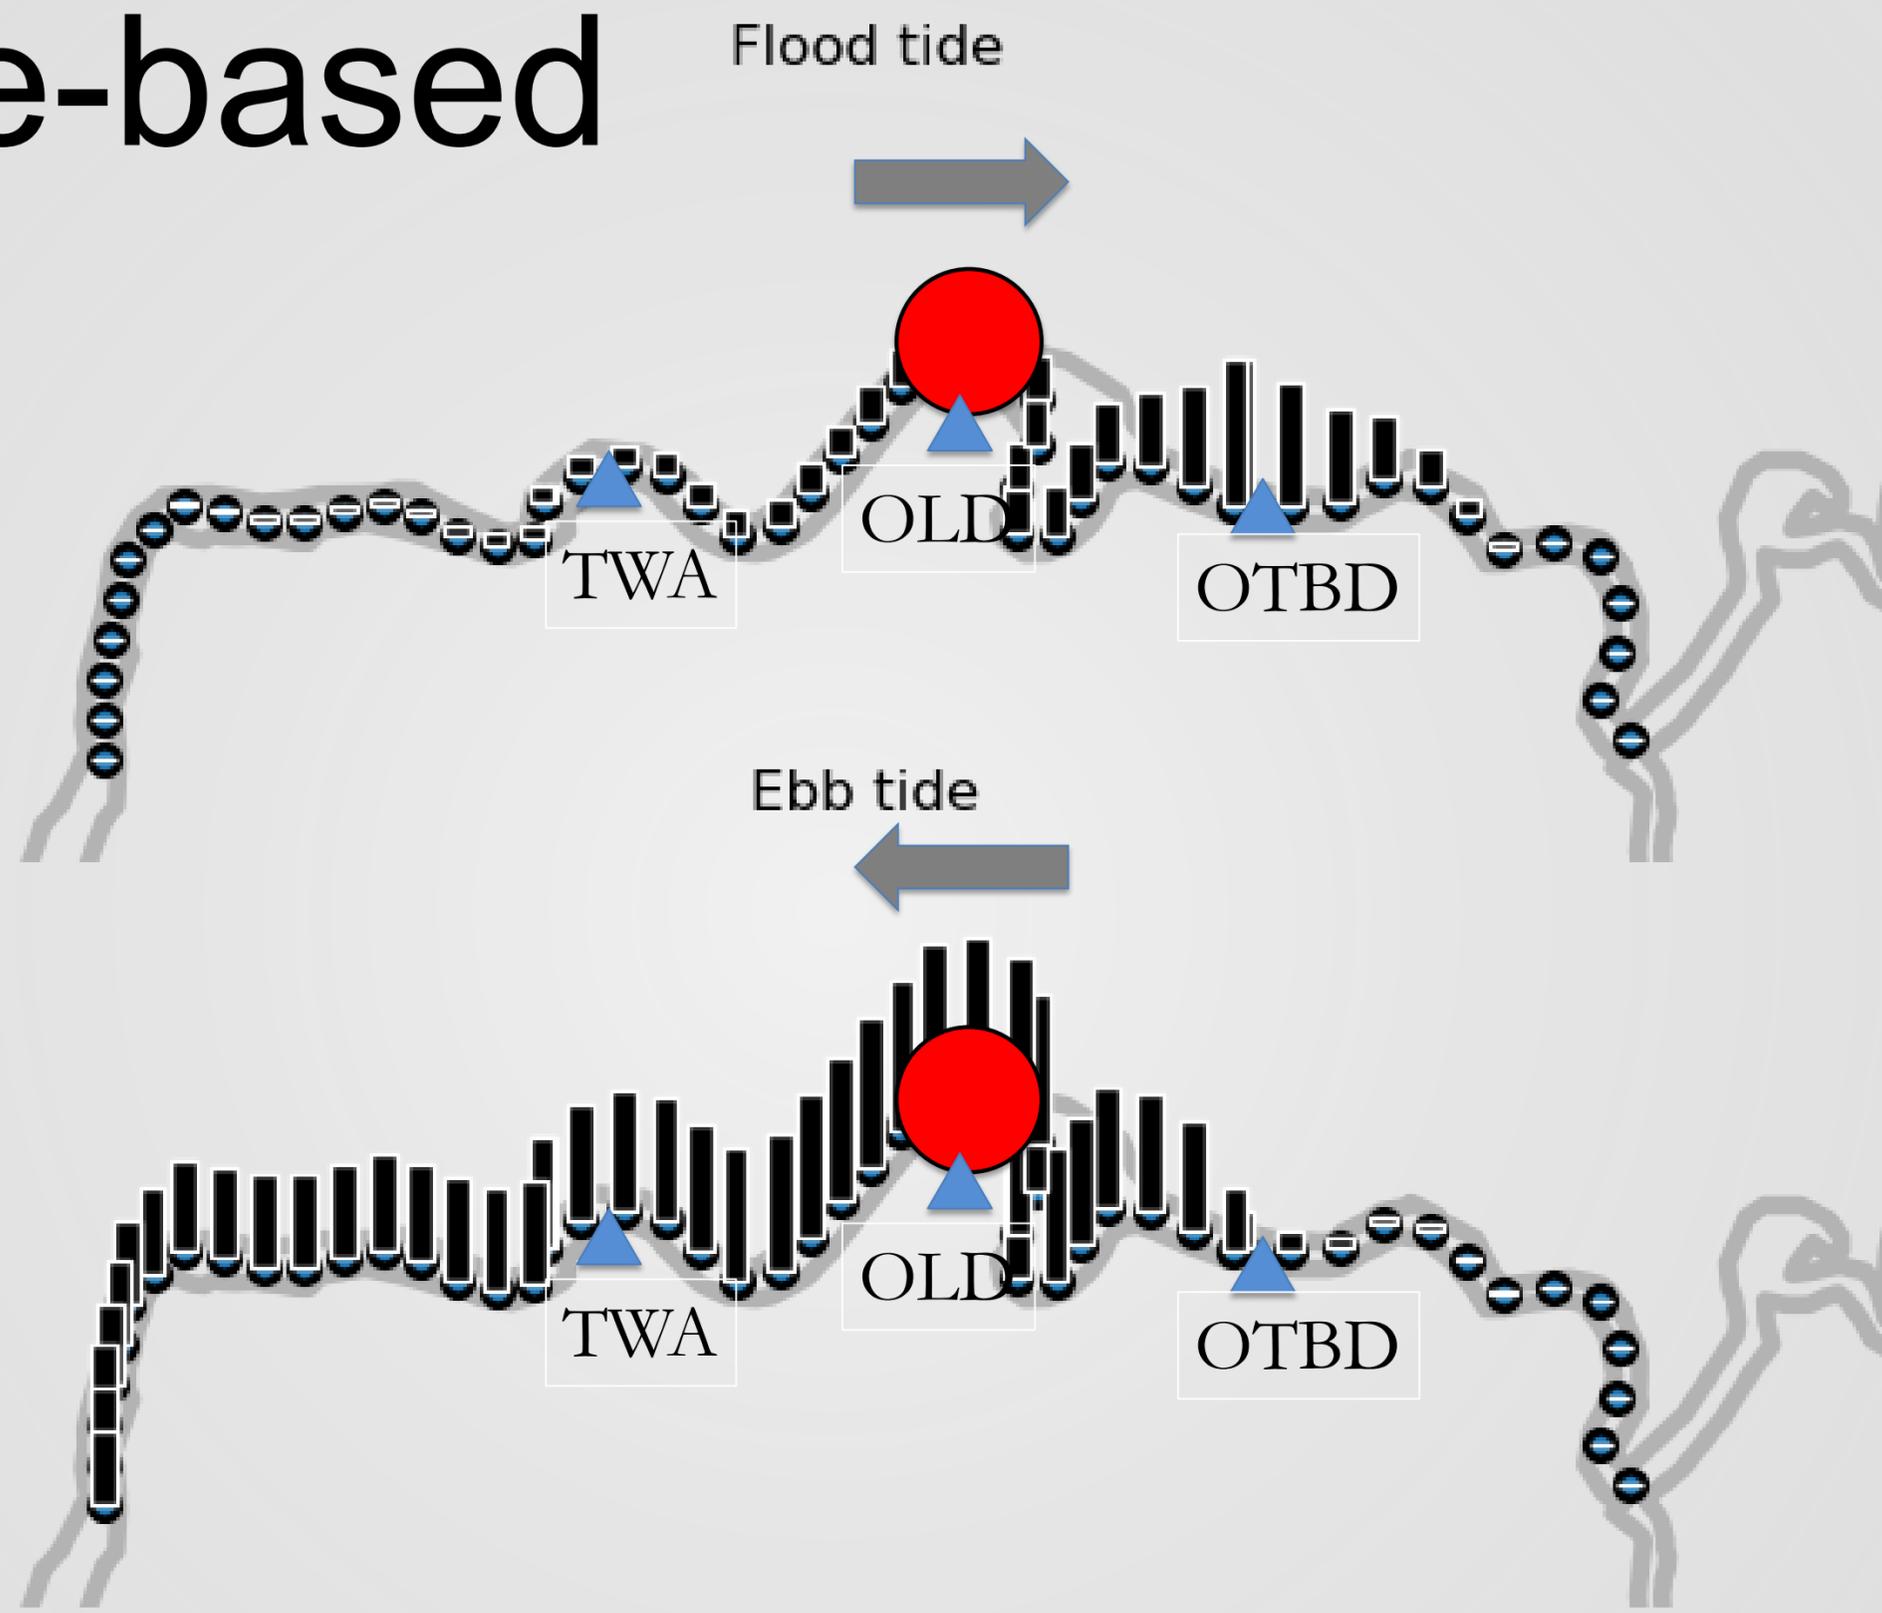

# Nudging (Newtonian Relaxation)

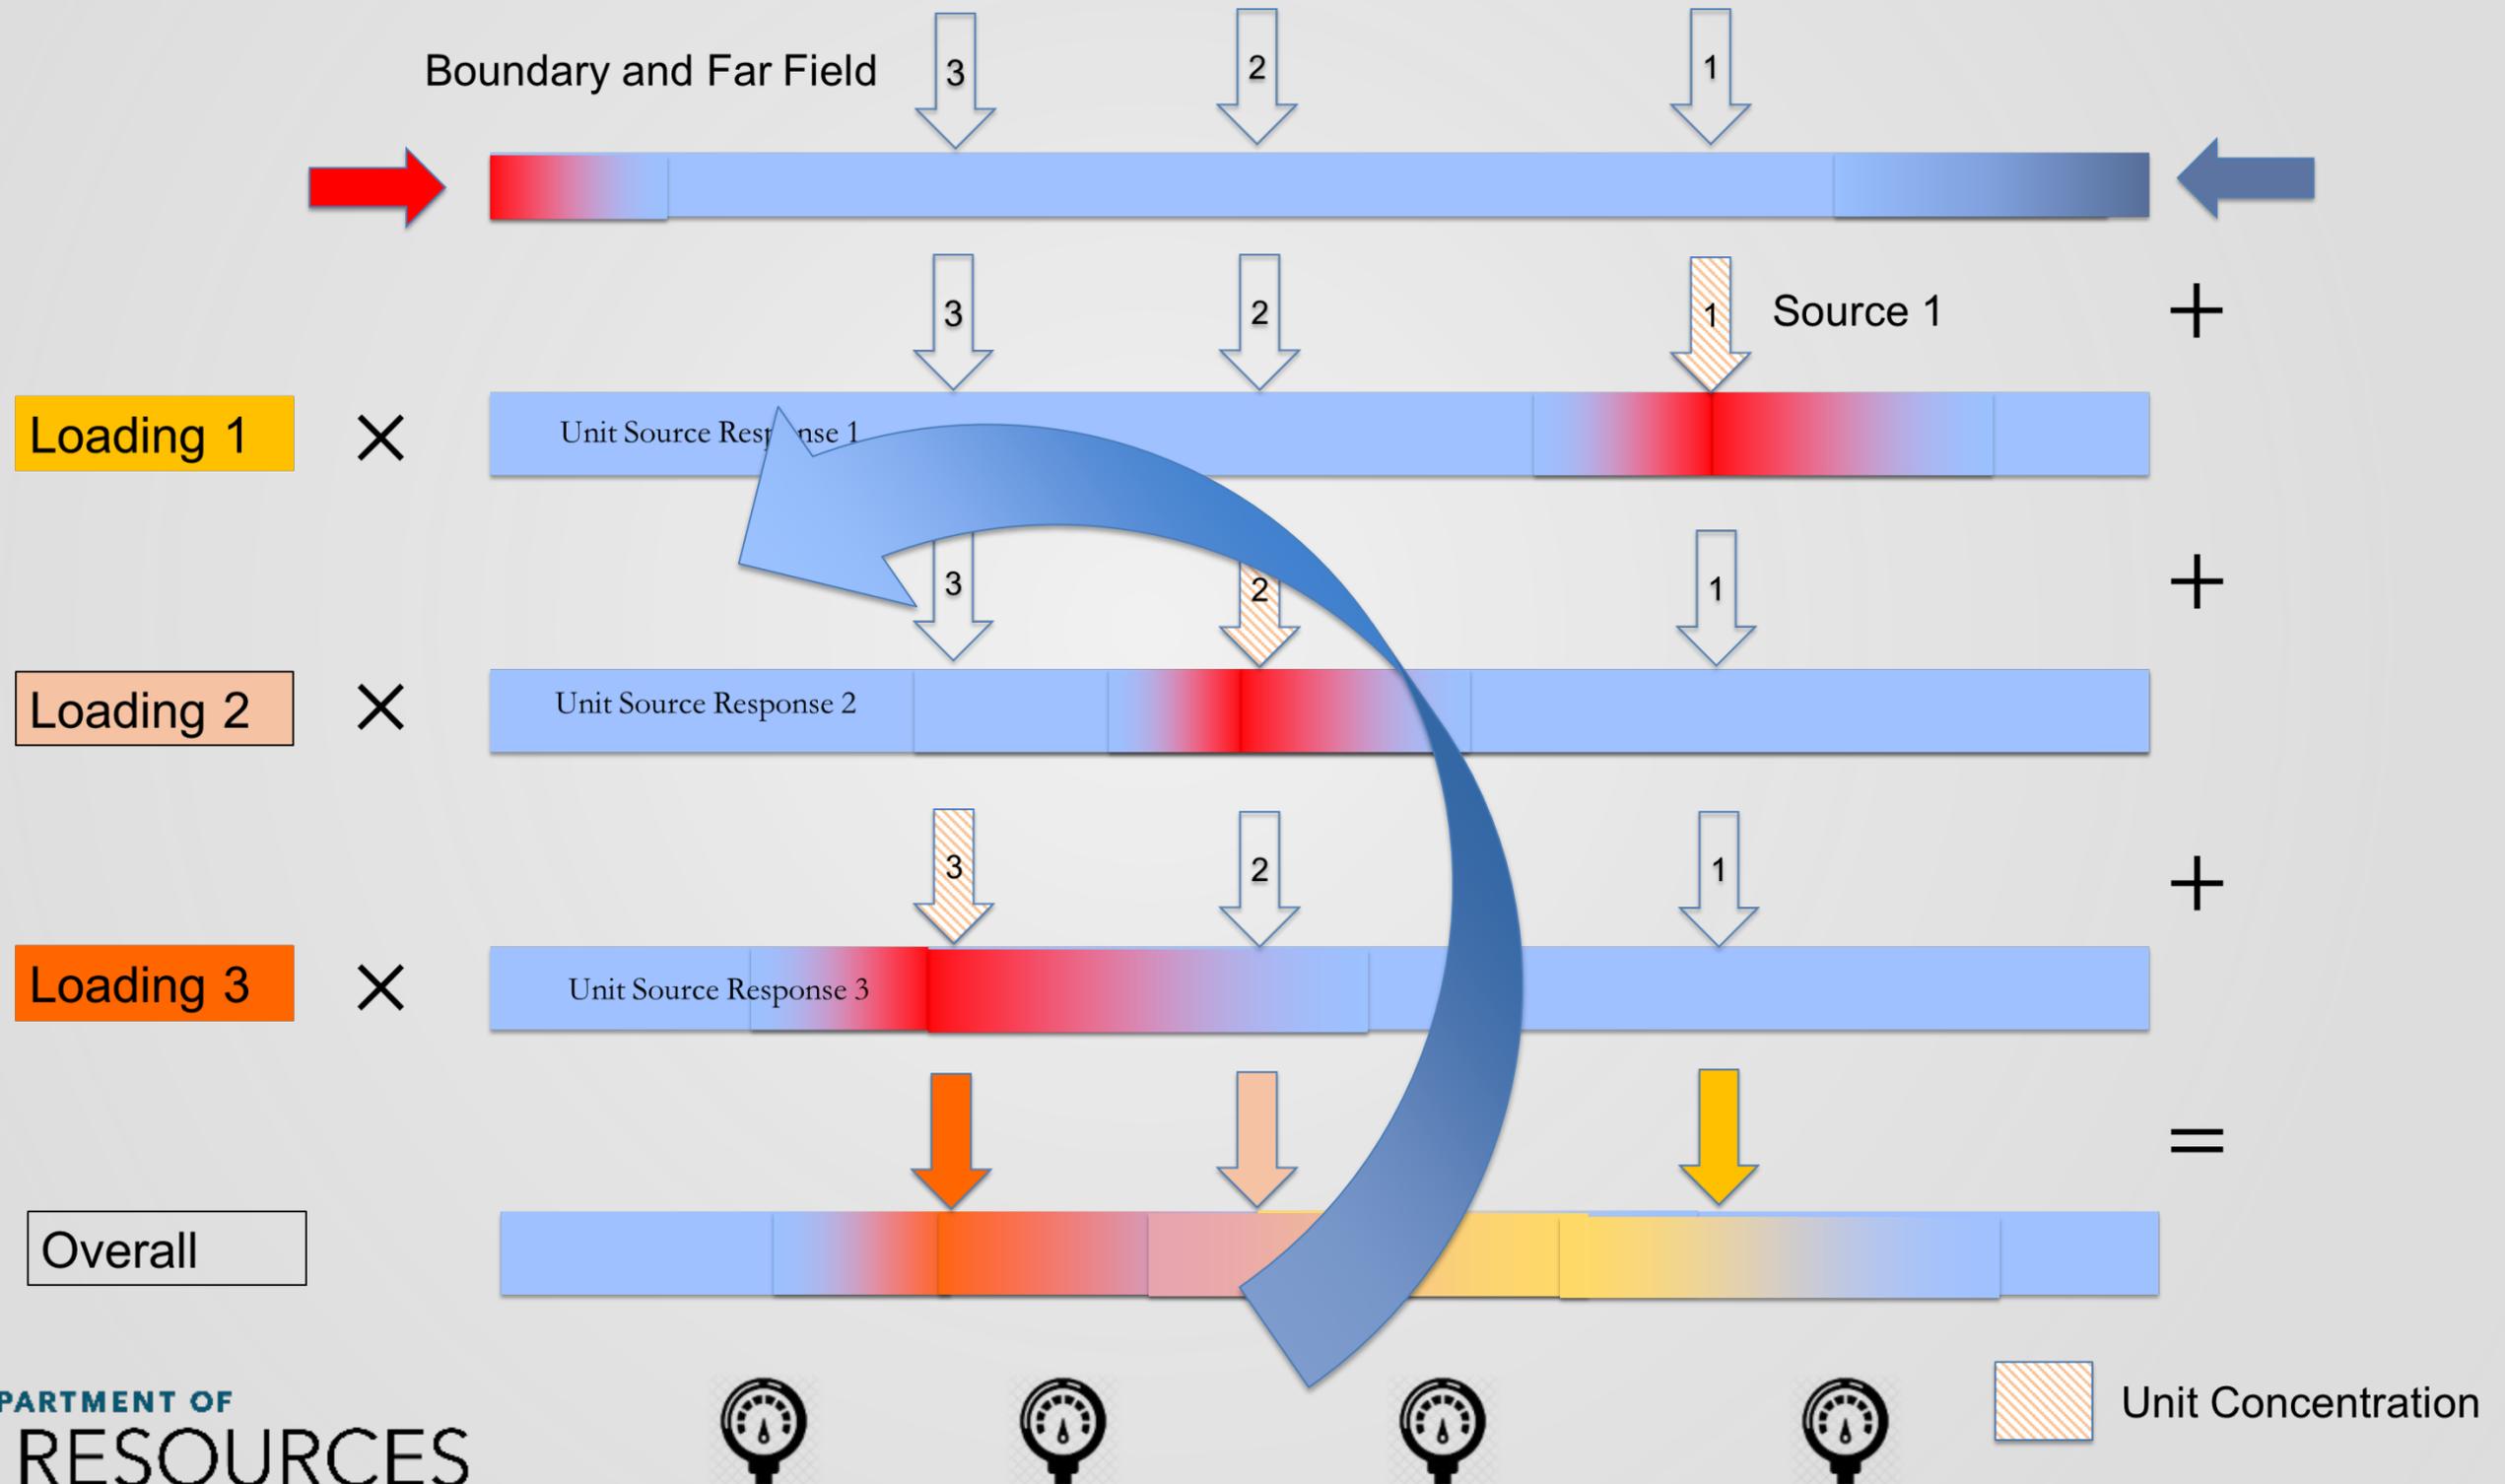

# Response-based

● Source location

▲ EC Stations

# Superposition (fingerprinting)

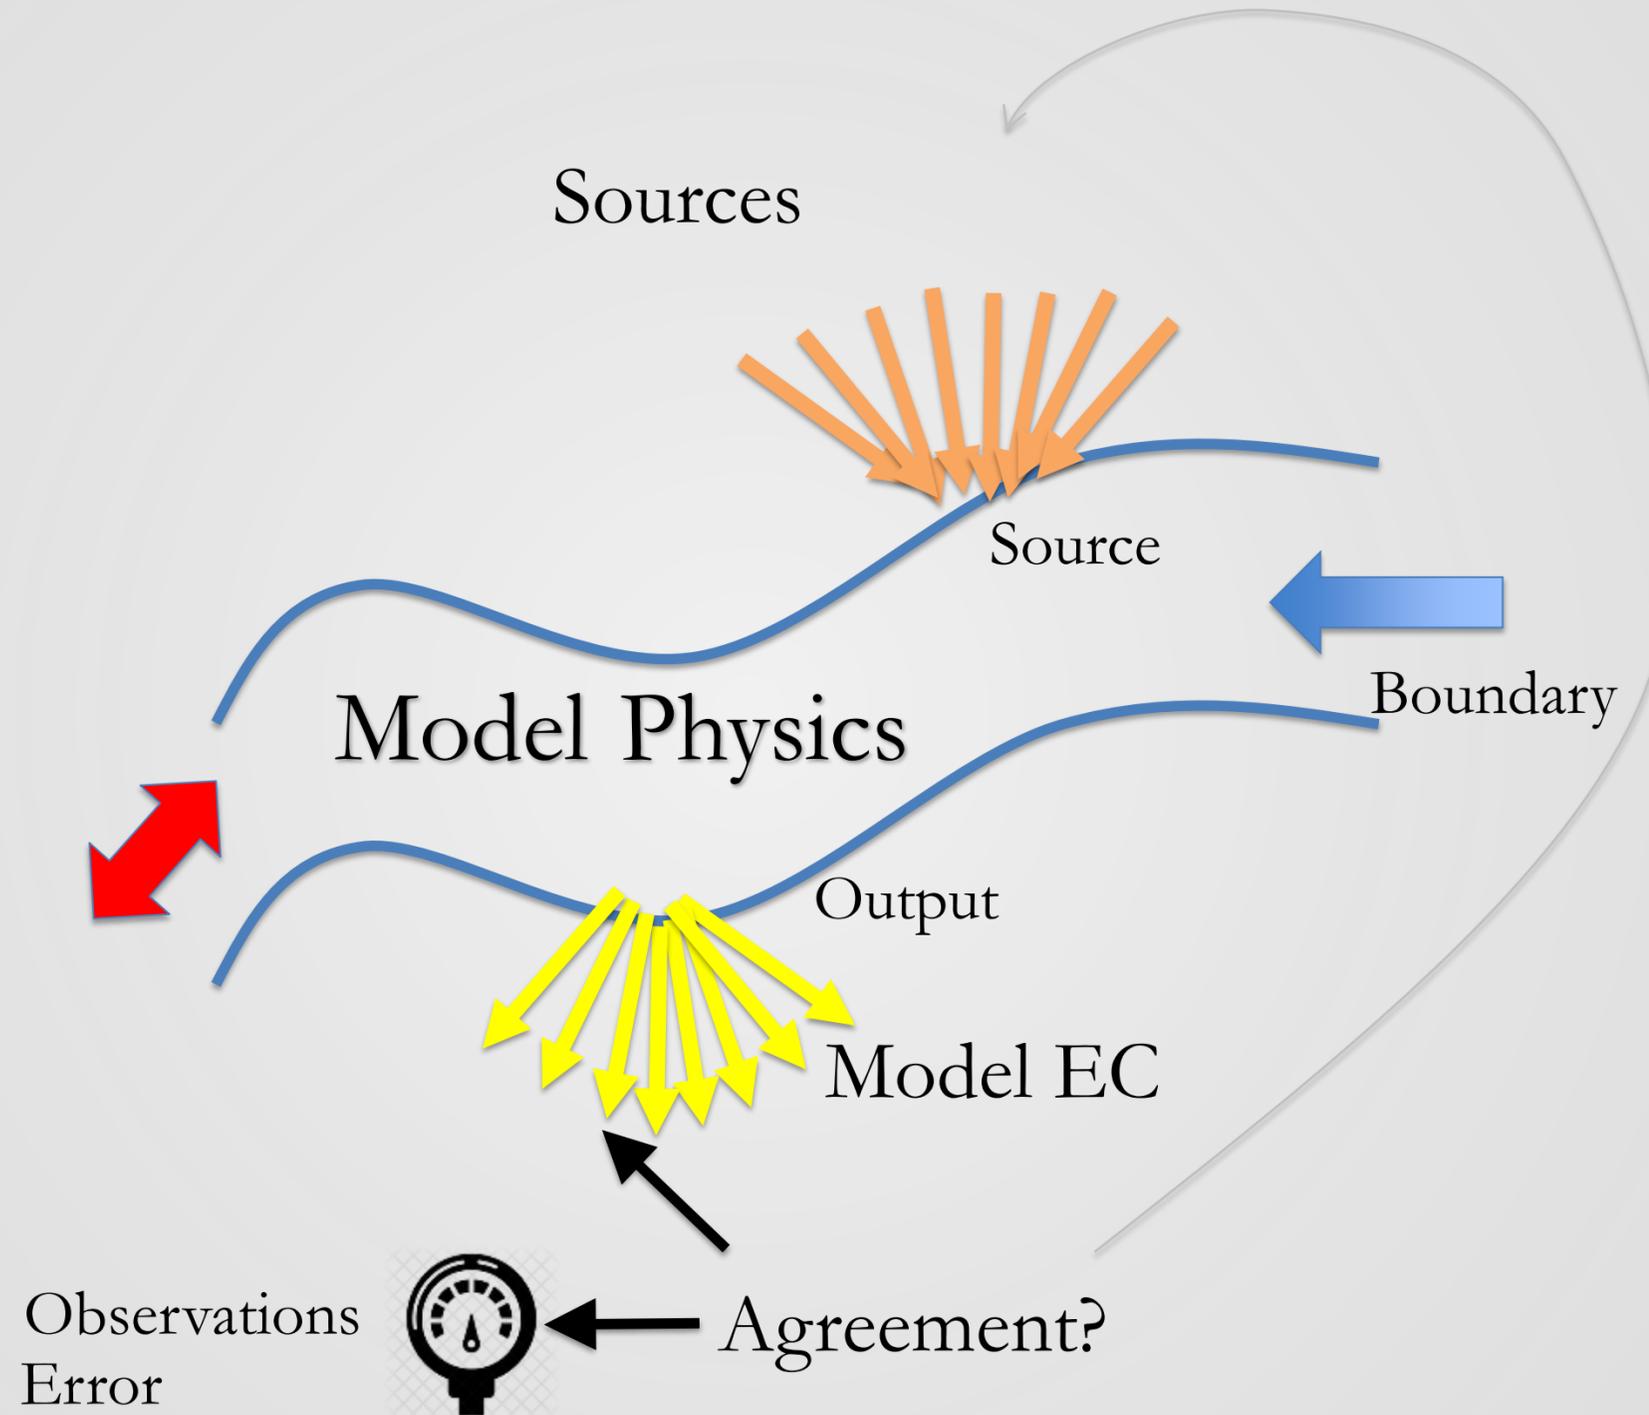

# (Ensemble) Kalman Filter

## Uncertainties:

- EC source
- Model
- Observations

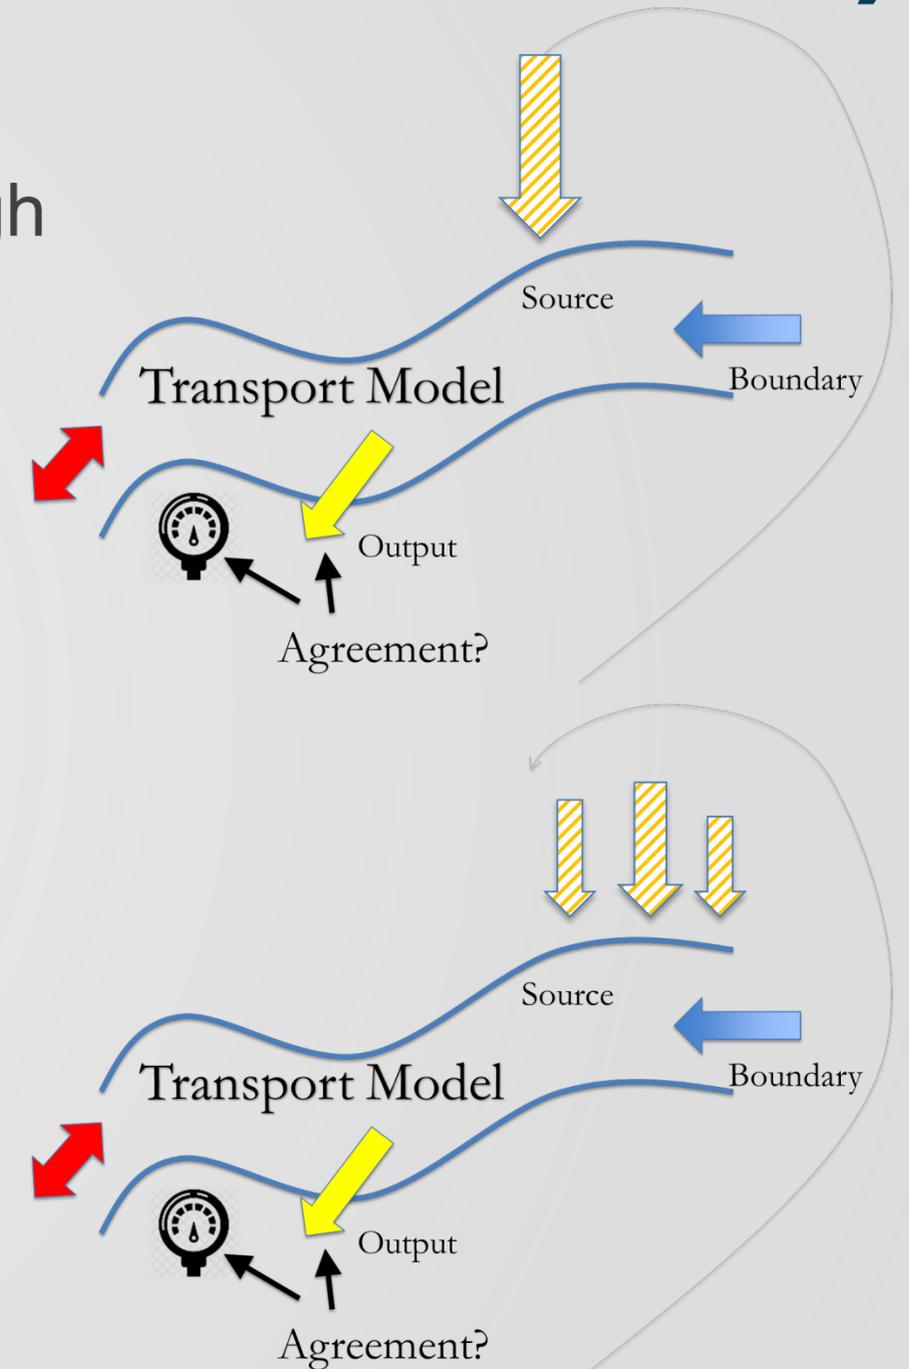

# Ensemble Kalman Filter Traits

- Supports mild nonlinearity
  - Can include flow uncertainty
- On-line
  - Good for real time applications or estimating “this year”
  - Key question is “how will we use it for planning”
- Assume known candidate source locations

# Concerns/limitations(Our Starter List)

- Validation
  - EC time series used in the assimilation process not enough
    - Reserved stations
    - Spatial transects
  - Inferences should benefit both DSM2 and SCHISM
- Expected technical problems requiring checks:
  - Lack of uniqueness (regularized problem is stable)
  - Precision:
    - Reach level only
    - No differentiation of origin (groundwater, drain)
  - Behavior under misspecification of flow (indicators)
- Non-technical such as liability

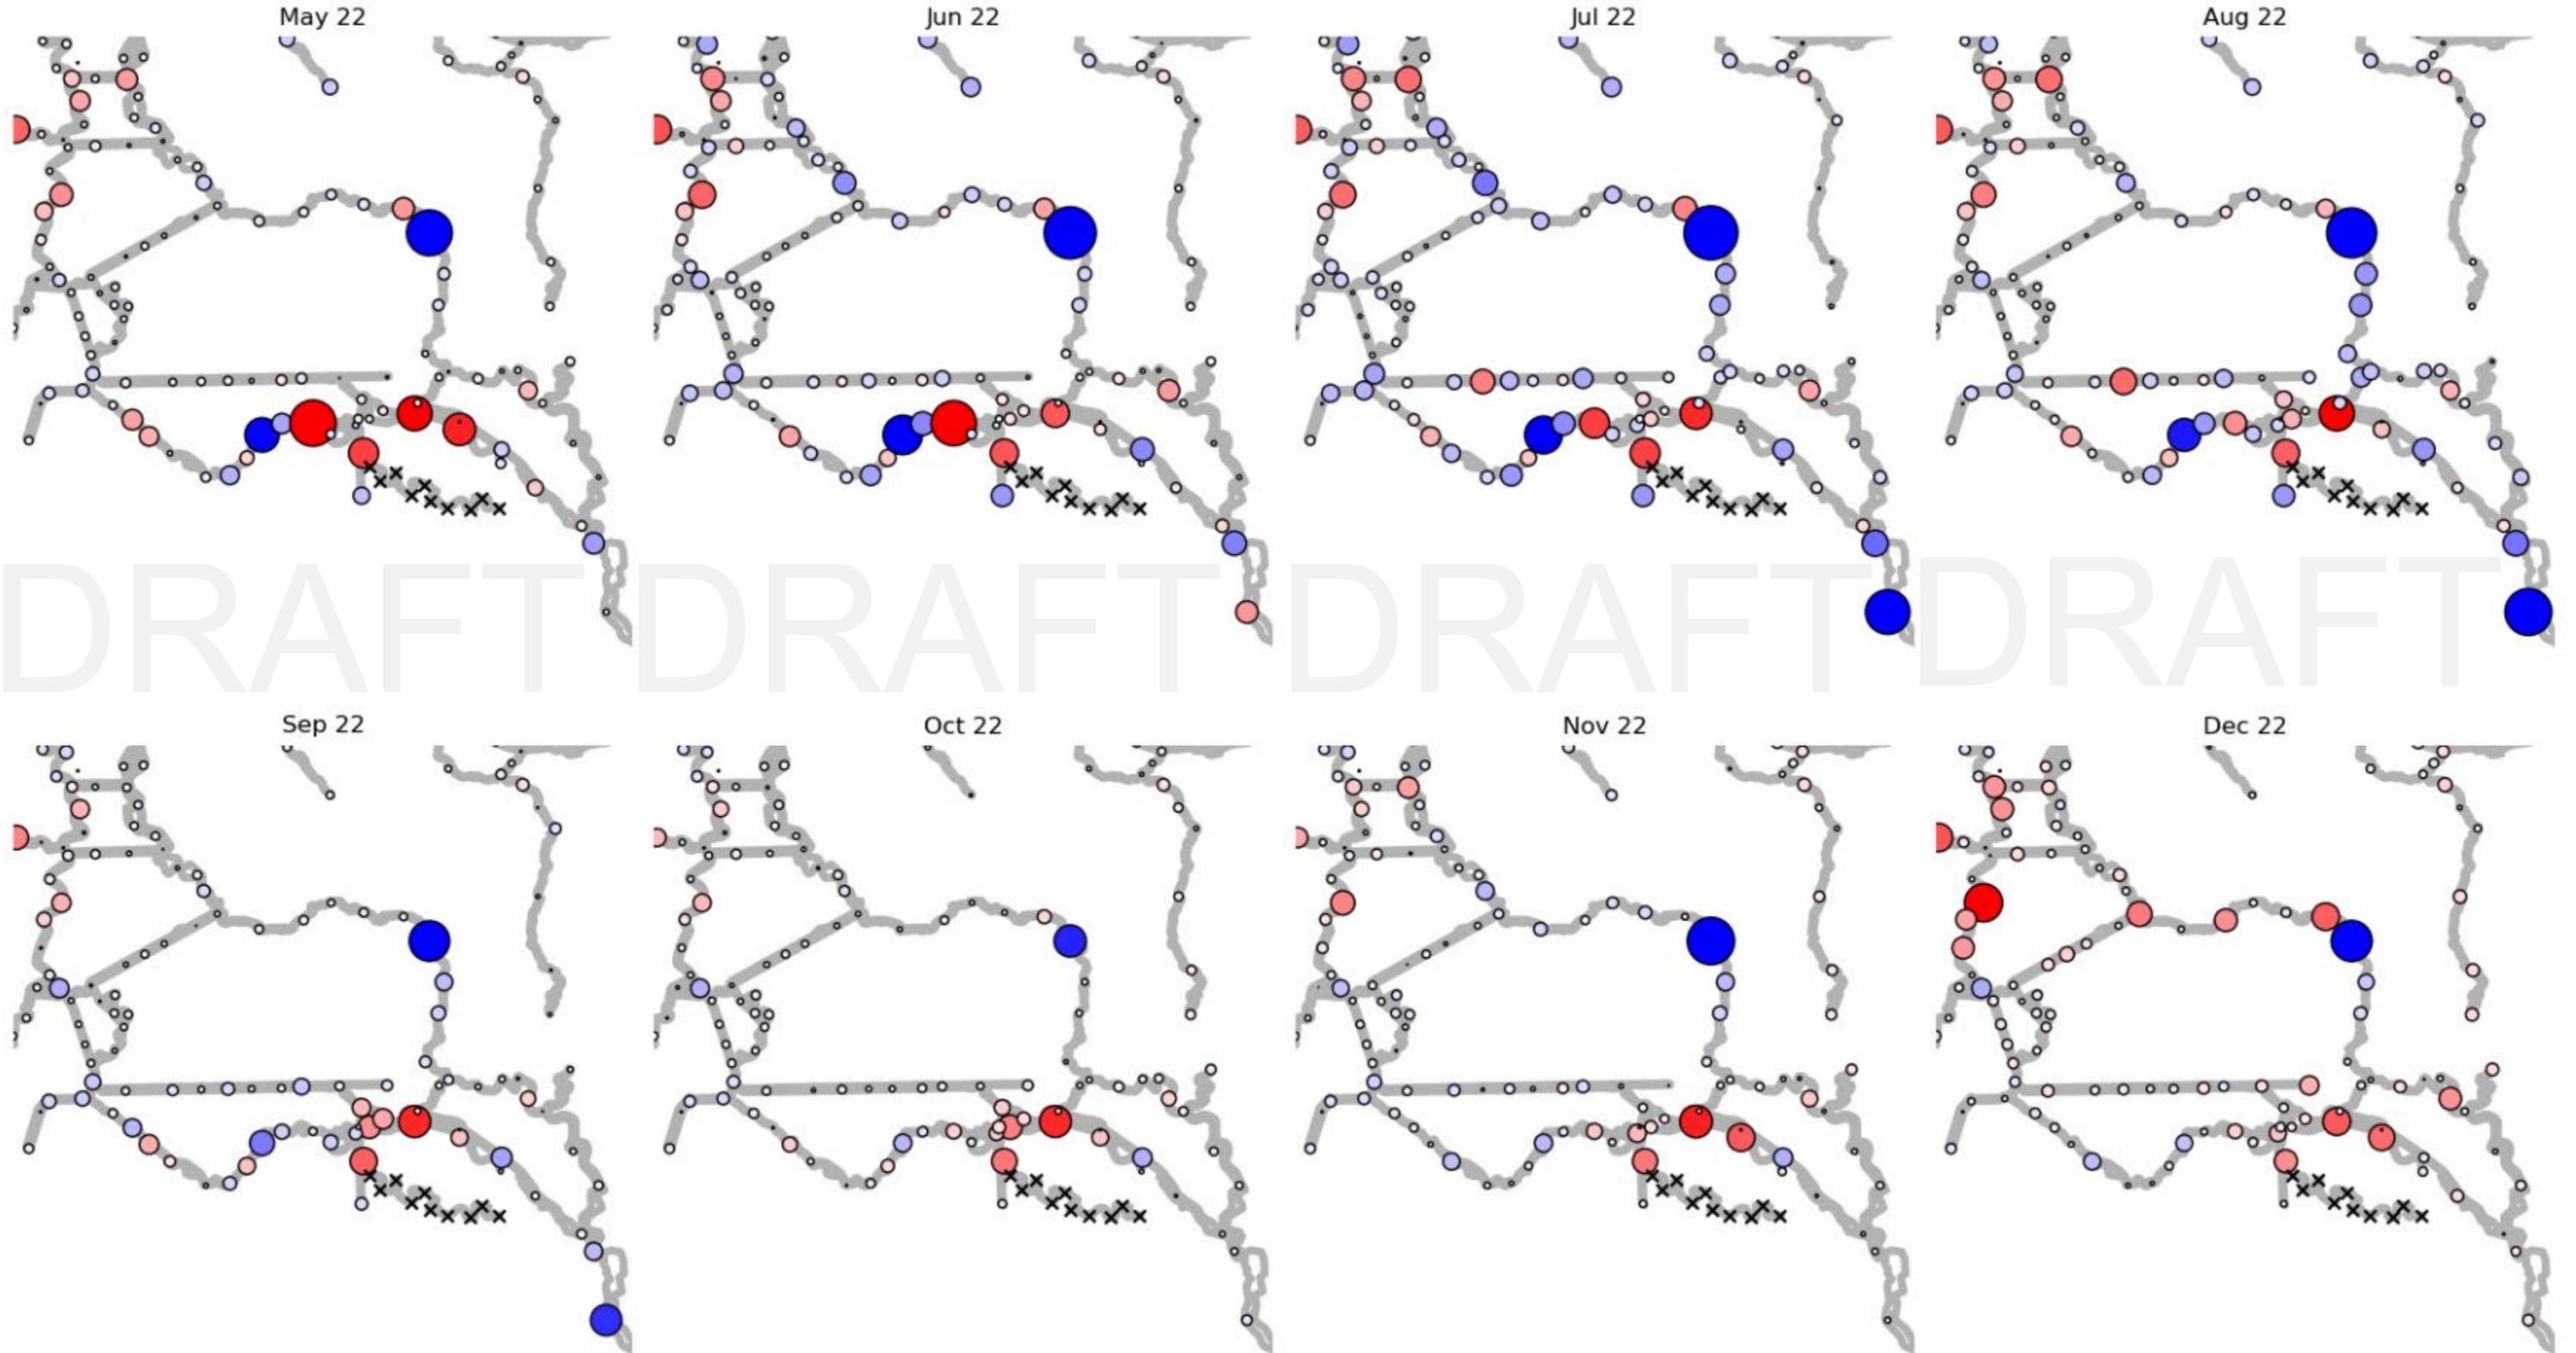

# Example Application and Results

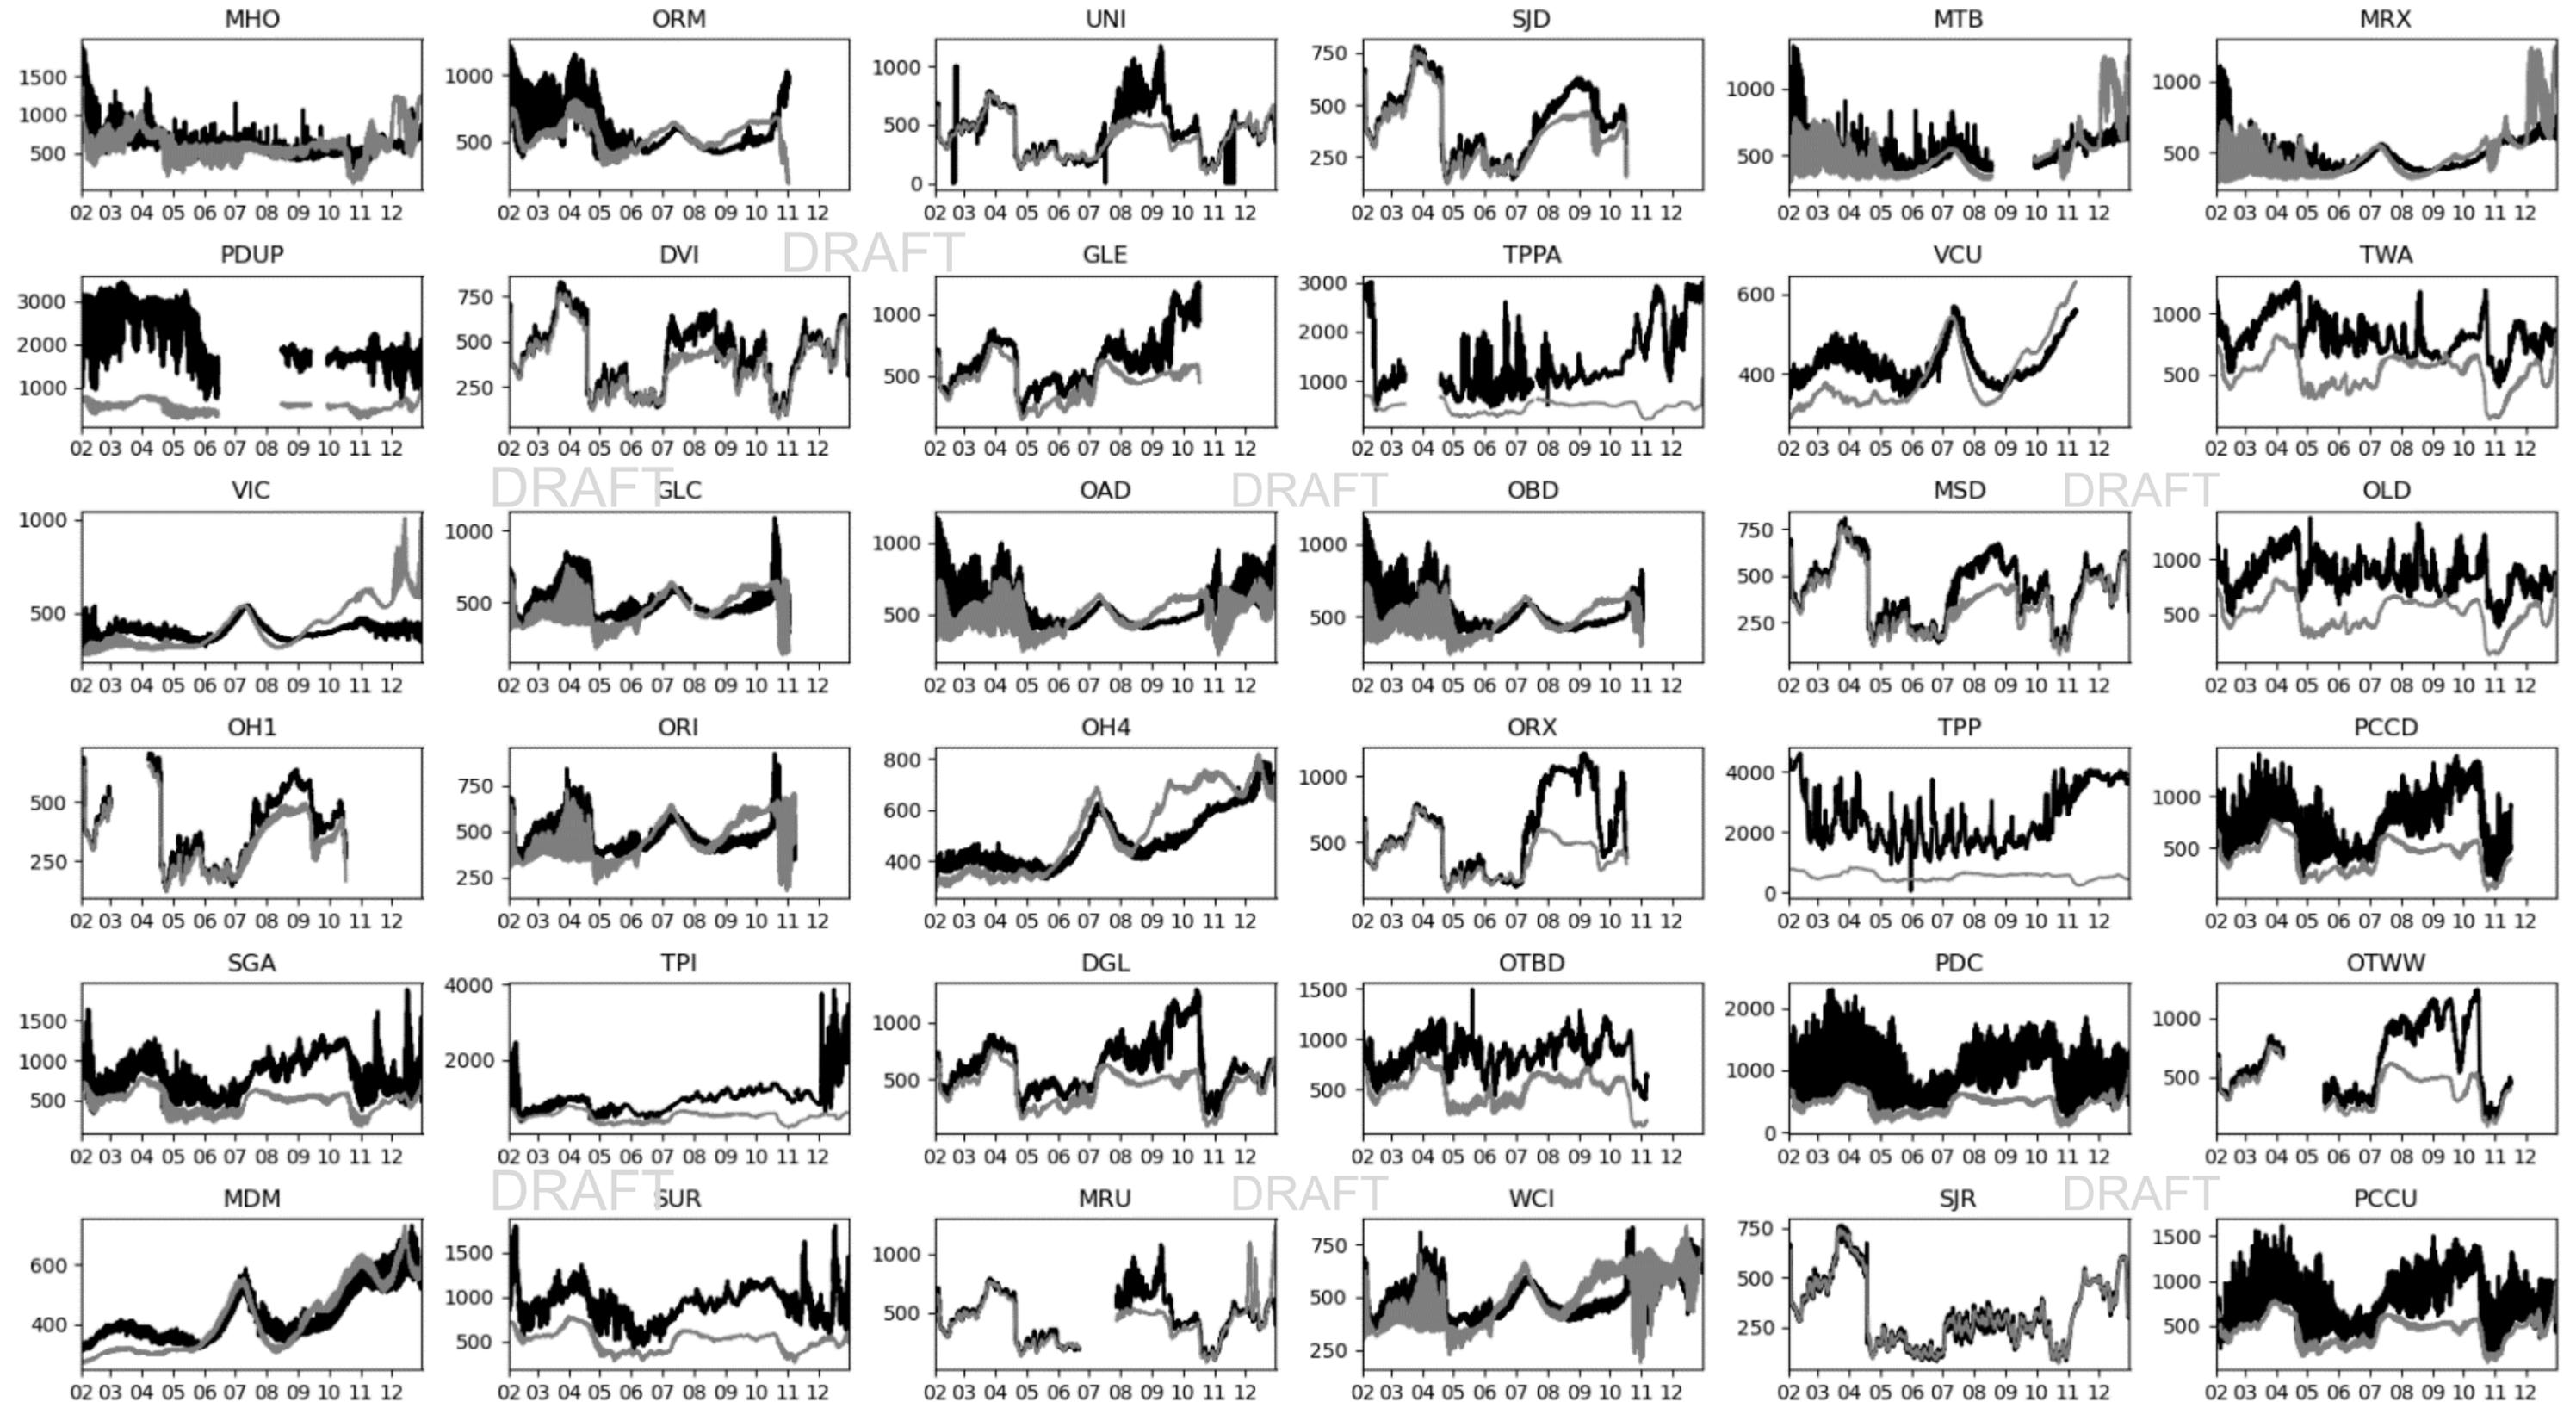

- Response/fingerprint method
- Every DSM2 node in South Delta a candidate
- Few sources (exact # not specified)
- Source EC piecewise linear, weekly increments.

# Salt load map

# DSM2 modeling results (base run)

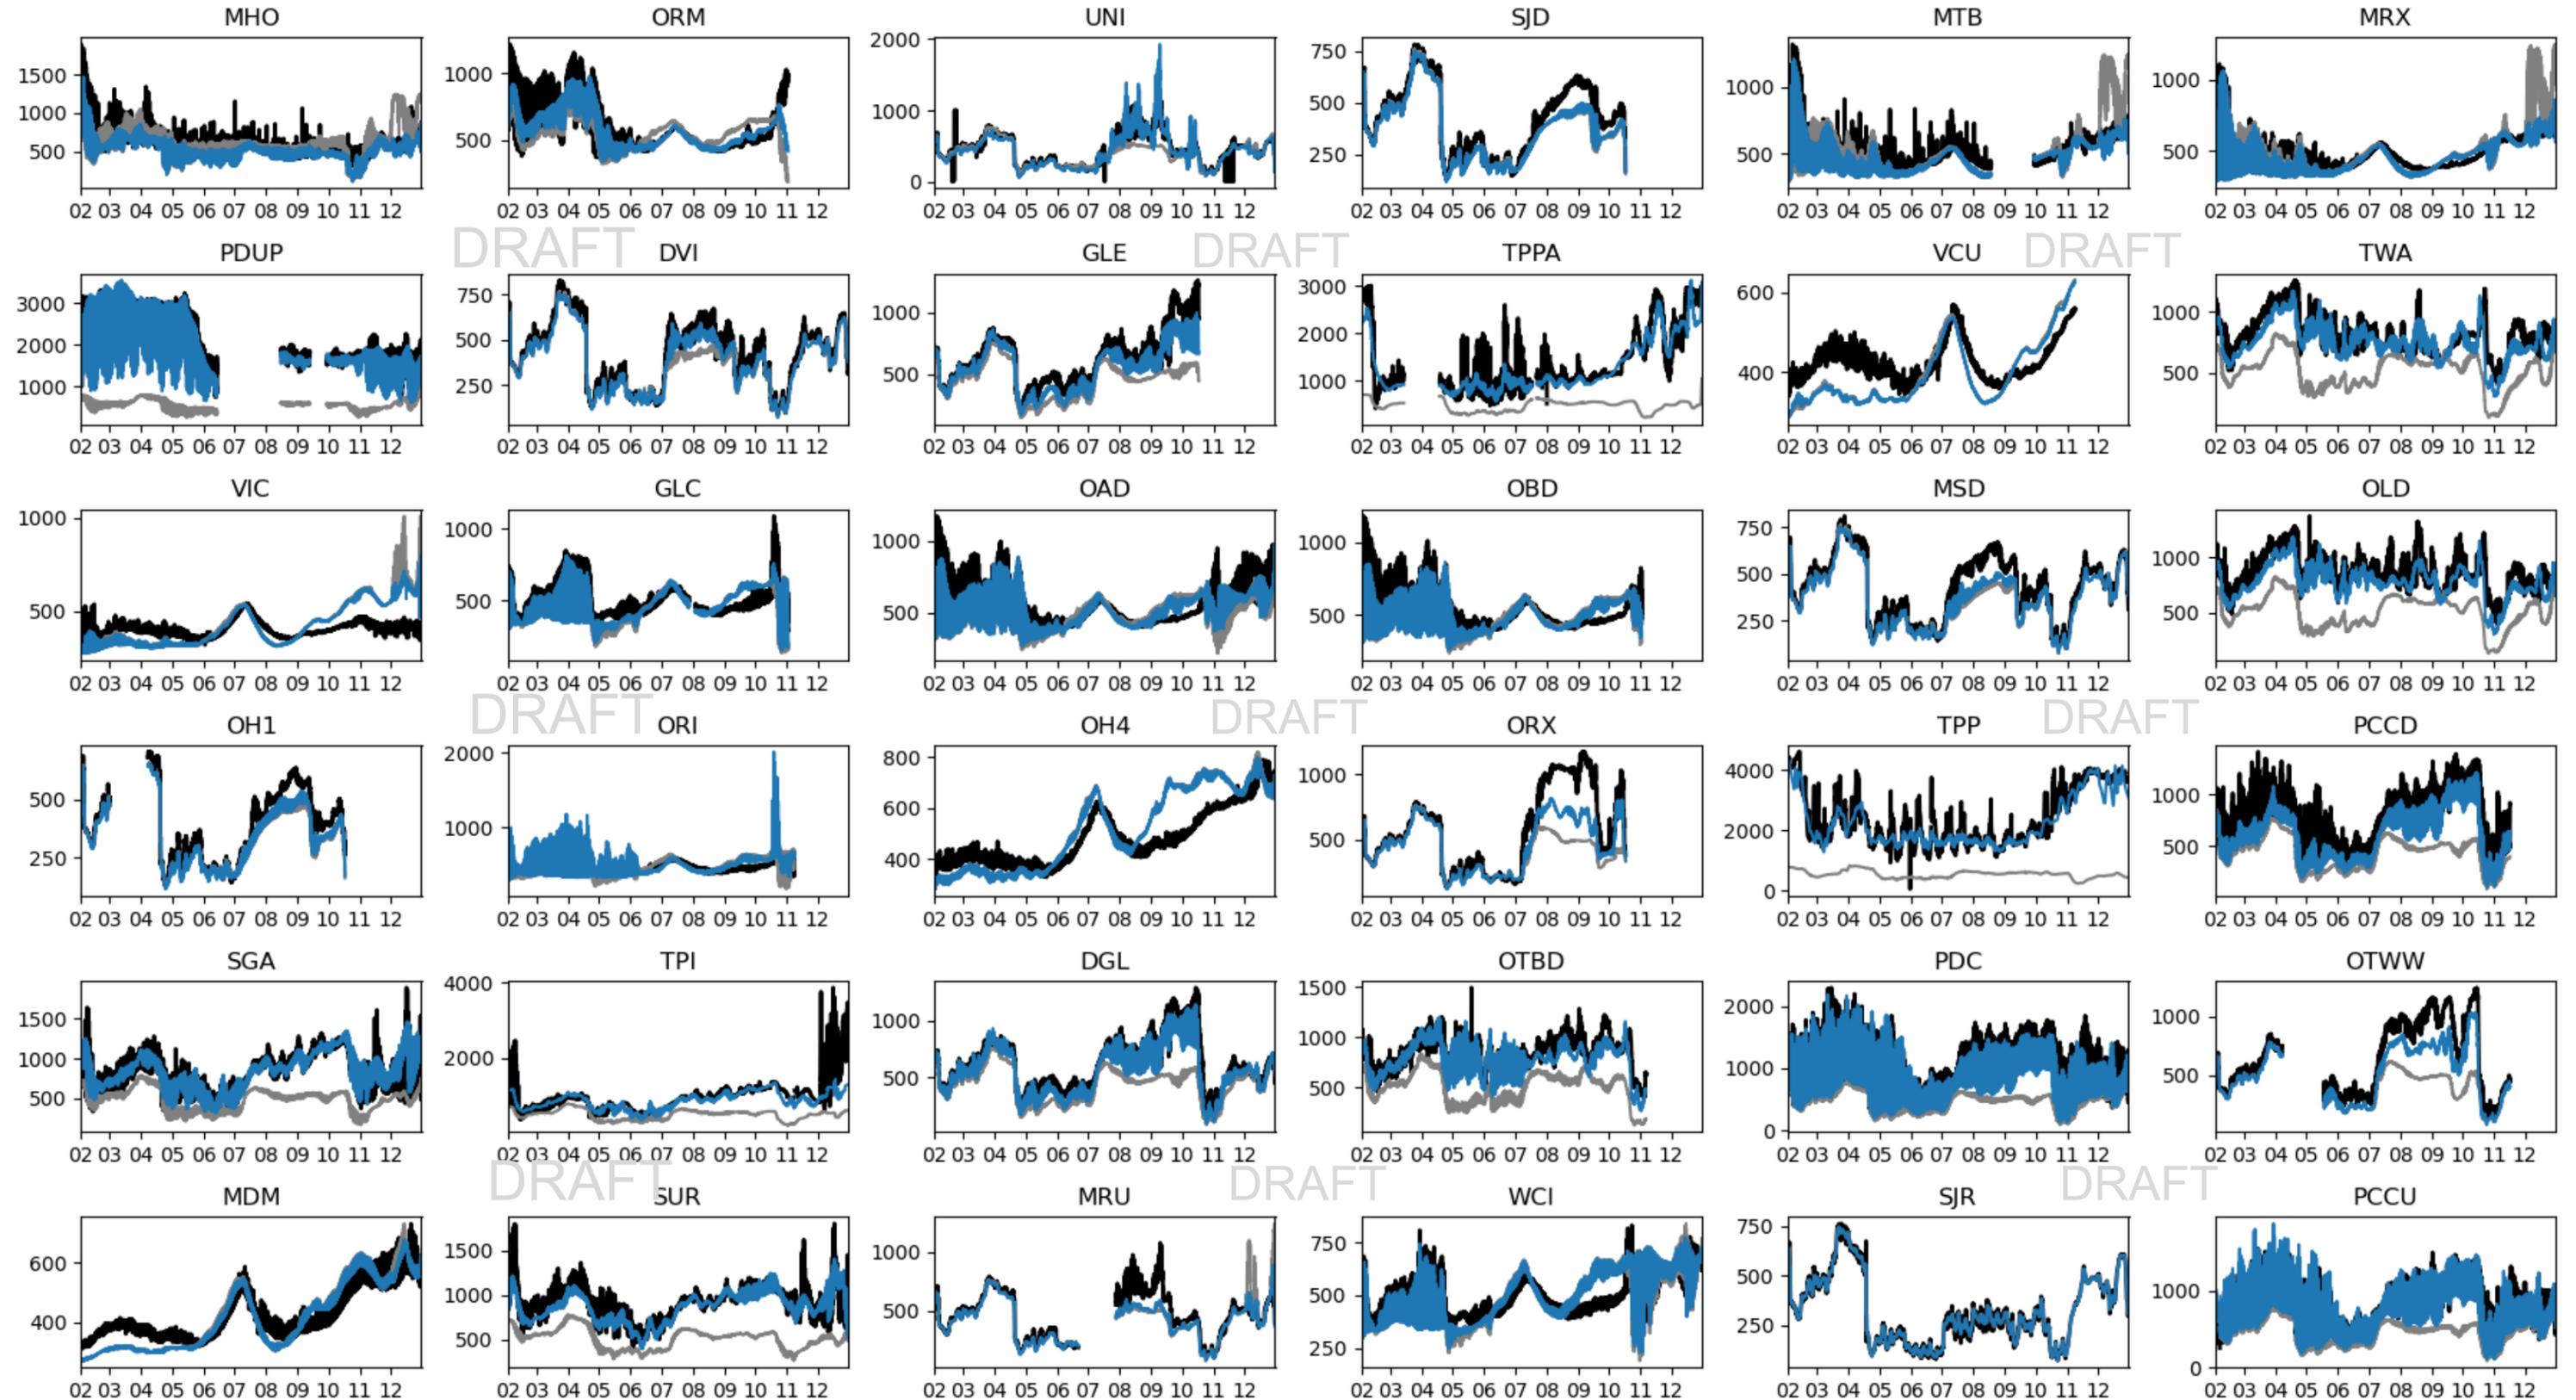

EC ( $\mu\text{S}/\text{cm}$ )

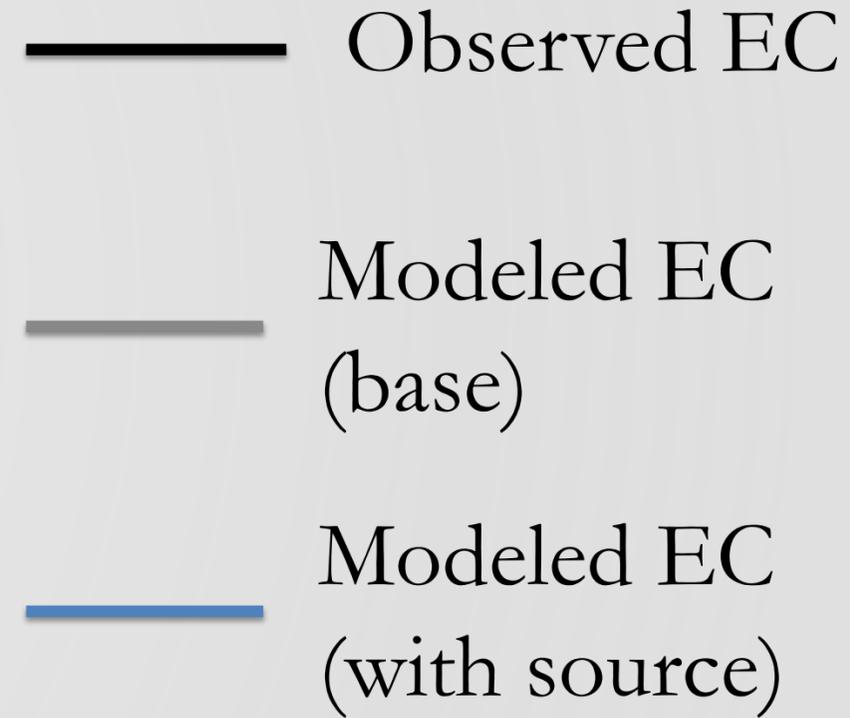

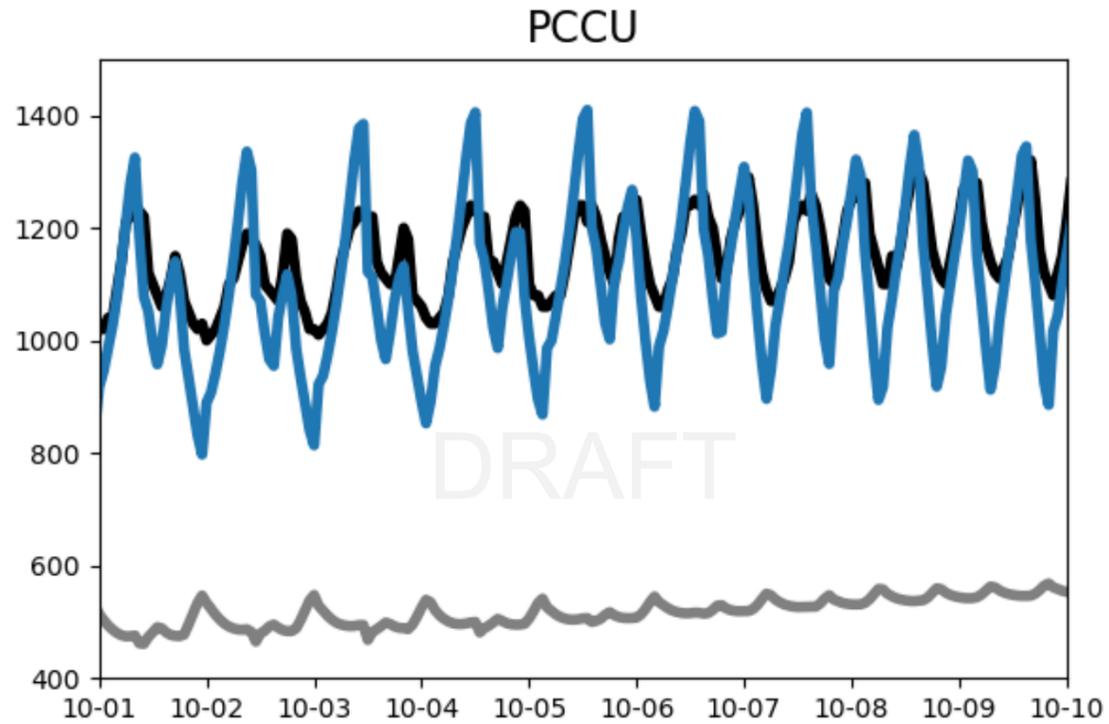

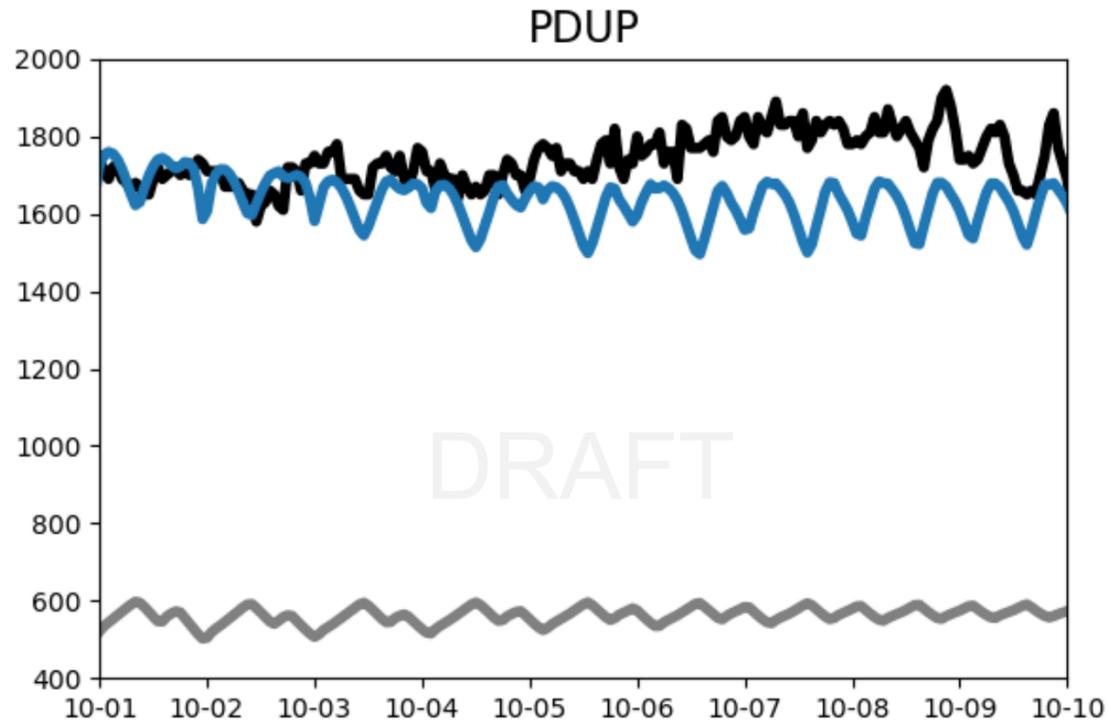

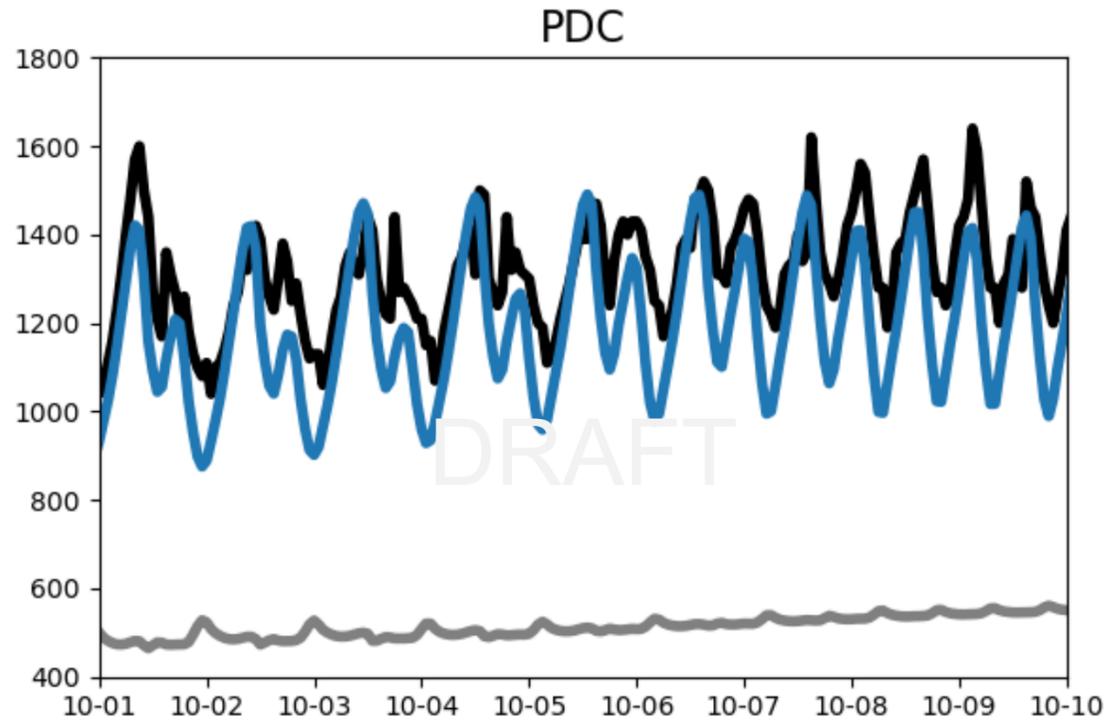

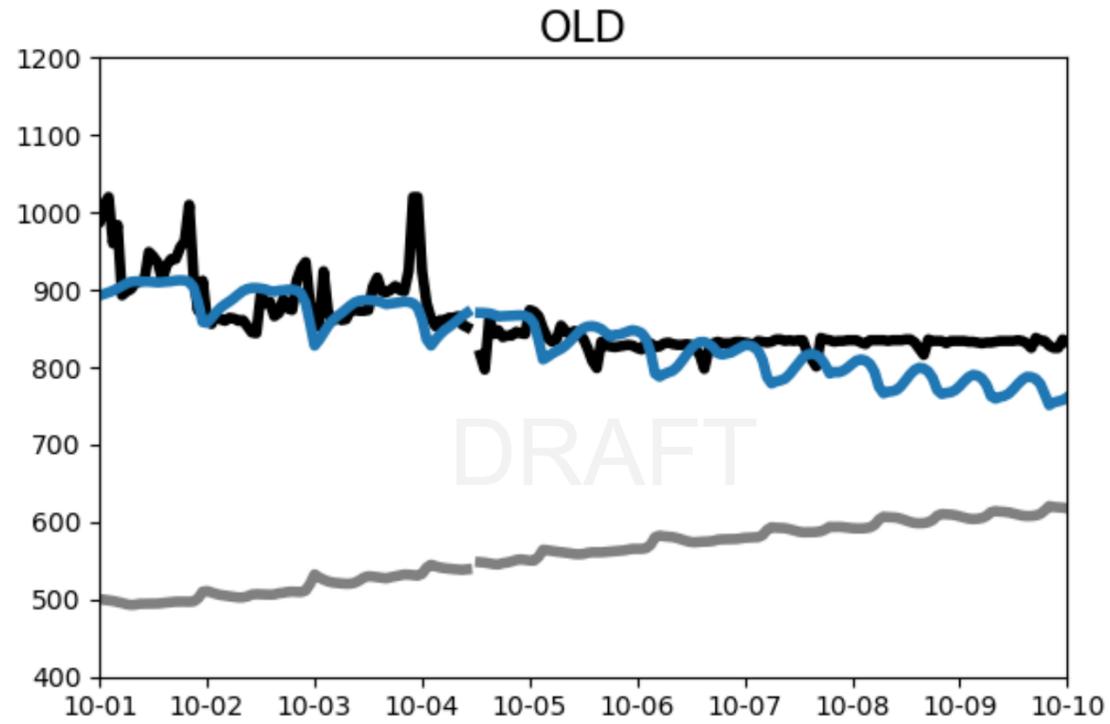

# DSM2 modeling results (with source)

EC ( $\mu\text{S}/\text{cm}$ )

EC ( $\mu\text{S}/\text{cm}$ )

# Discussion

- [Zhenlin.Zhang@water.ca.gov](mailto:Zhenlin.Zhang@water.ca.gov)
- [Eli.Ateljevich@water.ca.gov](mailto:Eli.Ateljevich@water.ca.gov)

# Closing & Next Steps

- Most field data collection ending at the end of 2023 and transitioning into analysis and preparation of MSS Report.
- The draft MSS report will be shared with the Technical Workgroup for review in summer 2024.
- New MSS Web Page: <https://water.ca.gov/Programs/State-Water-Project/Operations-and-Maintenance/Monitoring-Special-Study>

**THANK YOU!!**
