

State Water Project Facilities Update

Background

Consistent with its statutory responsibility to review the construction and operation of the State Water Project (SWP) in Water Code §165, the Water Commission will receive a briefing on two key SWP facilities.

On October 18, Commission members Ball, Byrne, and Del Bosque toured several State Water Project (SWP) facilities in Southern California. At Alamo Pumping Plant, they discussed future plans to install a second generator. Division of Engineering staff will present an update on engineering studies, considerations, and the status of this project.

On November 22, a major fire broke out at the Ronald B. Robie Pumping Generating Plant near Oroville. There were no injuries, but the facility suffered extensive electrical and structural damage. The plant is not operational and will require significant assessment and repair work. SWP staff will brief the Commission on the incident.
