

Update on SWP Facilities and Operations, including Thermalito Pumping-Generating Plant

DWR staff will brief the Commission on State Water Project (SWP) facilities in the area including an update on the cleanup activities at the Ronald B. Robie Pumping Generating Plant. On November 22, 2012, a major fire broke out at the Robie Plant. The facility suffered extensive electrical and structural damage. Cleanup work has been underway for many months, and the Commission was briefed on the incident in December 2012 and April 2013.

At this meeting, David Roose, Chief of the SWP Operations Control Office, will provide an update on the clean-up work, impacts on water supplies, and the value engineering assessment for the plant.
