

**Update on Alamo Powerplant**

**Background**

The Commission is responsible for the completion of an annual review of the construction and operation of the State Water Project, and reporting its findings to the Director of the Department of Water Resources and to the Legislature, with any recommendations it may have (WC §165).

On October 18, 2012, consistent with these duties, Commission members Ball, Byrne, and Del Bosque toured several State Water Project (SWP) facilities in Southern California. At Alamo Pumping Plant, they discussed future plans to install a second generator.

On December 12, 2012, DWR Division of Engineering staff presented an update on engineering studies, considerations, and the status of this project to the full Commission. The Commission supported the expedited review and implementation of this project in its 2012 Annual Review of the Construction and Operation of the State Water Project.

At this meeting, DWR staff will provide an update to the Commission on the current status of the project.
