

Action Item: Approval of Commission Workplan

Background

The 2012-2013 Commission workplan provided direction and helped frame discussion. It served as a useful tool to ensure that the Commission and staff addressed the key points of the Commission's Strategic Plan. With the guidance of the workplan, the Commission was able to address most of its planned topics and issues in 2013.

Staff will present a draft workplan for 2014. The workplan will outline specific actions for the Commission and staff to take over the next year to implement the strategic plan.

Key points of this year's workplan include a public workshop on the impacts of drought on small water systems and demand management opportunities, continued consideration of activities regarding climate change, water-energy nexus, and the Delta, a tour of State Water Project facilities, and a review of staff draft of proposed text and issues for Regulations and Guidelines for the Quantification of Public Benefits of Water Storage Projects.
