

Implementation of Governor's Water Action Plan

Background

In January, the California Resources Agency, the California Environmental Protection Agency, and the California Department of Food and Agriculture released the final California Water Action Plan which identifies key actions for the next one to five years that address urgent needs and provide the foundation for the sustainable management of California's water resources.

The 10 key actions identified in the Plan include:

- Make conservation a California way of life.
- Increase regional self-reliance and integrated water management.
- Achieve the co-equal goals for the Delta.
- Protect and restore important ecosystems.
- Manage and prepare for dry periods.
- Expand water storage capacity and improve groundwater management.
- Provide safe water for all communities.
- Increase flood protection.
- Increase operational and regulatory efficiency.
- Identify sustainable and integrated financing opportunities.

Carmel Brown, Executive Advisor to Deputy Director Gary Bardini, will update the Commission on current DWR activities and areas of progress to implement the objectives of the Plan.
