Chairman Joseph Byrne and Members
California Water Commission
POBOX 942836
Sacramento California 94236-0001

Chairman Byrne and Members:

I attended a recent meeting hosted by Elected officials to learn more about the future of water, specifically the process required by Proposition 1 and your role.

A complex issue and challenging assignment, your efforts are appreciated.

As a fourth generation resident of California, It is my desire to see that the promise of the campaign for Proposition 1 be kept. California needs a new source and storage of water, which Sites Reservoir will provide.

Sites Reservoir a comprehensive project that will add new water to the storage system for human consumption as well as ecological and other public benefits.

Being excited about the prospect of Sites Reservoir being built to provide much needed water storage and security. I appreciate your consideration and work to distribute Proposition 1 monies in an efficient manner.

My father Stanley Pittman served in the 50's on Feather River Project Association advocating the Oroville Dam project. I have a long experience from his service and my current service on Oroville City Council, Supplemental Benefits Committee, Oroville Dam Re-licensing committee and many other public benefit concerns.

Clearly the case of additional water storage in Northern California has been made since the 1950's and it's well past time for additional water storage for the prosperity of whole of California.

Many of us in Oroville have experience with water reservoirs and effects on community. Please know myself and others are available for discussion at any time and gladly support additional water storage.

Thank you for your consideration.

David W. Pittman
Oroville City Councilman
