

Presentation of Draft Concepts for WSIP Evaluation Regulations

Background

The Commission is developing regulations to describe how the projects applying for Water Storage Investment Program (WSIP) funding will be evaluated. These regulations are being developed in conjunction with the WSIP Regulations for the Quantification and Management of Public Benefits as a separate document. Together these two regulations will clearly define and implement the WSIP. At this meeting, Commission staff will present a framework for project evaluation and an overview of concepts that may be included in the Evaluation Regulations. This is an informational item.

During the presentation, the Commission will be asked to consider the following questions:

- Would Commission members like Delta benefits treated as a separate decision criteria?
- Would the Commission members like to consider the resiliency of all benefit types in its decision criteria?
- Would Commission members like to include implementation complexity in its decision criteria?
