

Update on State Water Project Critical Issues

Background

California Water Code §165 requires the California Water Commission to conduct an annual review of the progress of the construction and operation of the State Water Resources Development System and make a report on its findings to the Department of Water Resources (DWR) and the Legislature, together with whatever recommendations it deems appropriate.

At this meeting, Mark Andersen, DWR Acting Deputy Director for the State Water Project (SWP), will brief the Commission on key activities of the SWP including operations and maintenance and administrative issues. This is an informational item.
