Thank you, Commissioners, for the opportunity to comment.

I find the document faulty in its methods of calculating and second-guessing climate change. The regulations must leave room for various concerned water districts to assess and reassess their situations as unpredictable climate changes occur. In addition, there is no scientific reason to believe that climate changes will top out by 2050. Making that date's numbers the reference is arbitrary and can lead to faulty decisions.

A second item that concerns me about the Regulations is how the use of Prop. 1 funds are used. The Regulations seem to propose Prop. 1 funds for activities prohibited Prop. 1 . These contradictions need to be removed and use of funds clarified.

Thank you for the difficult work you are doing. Sincerely,
